

THE CONFERENCE BOARD

FOR RELEASE: 10:00 A.M. JST, FRIDAY, AUGUST 6, 2010

The Conference Board[®]
Japan Business Cycle IndicatorsSM
THE CONFERENCE BOARD LEADING ECONOMIC INDEX[®] (LEI)
FOR JAPAN
AND RELATED COMPOSITE ECONOMIC INDEXES FOR JUNE 2010

The Conference Board Leading Economic Index[®] (LEI) for Japan decreased 1.8 percent
The Conference Board Coincident Economic Index[®] (CEI) remained unchanged in June.

- The Conference Board LEI for Japan fell sharply in June, decreasing for the third straight month. New orders for machinery and construction continued to decline; the six-month growth rate of labor productivity and stock prices also fell sharply in June. With this month's decline, the six-month growth rate in the leading economic index continued to slow -- to 3.1 percent (a 6.3 percent annual rate) from December 2009 to June 2010, substantially down from 17.5 percent (about a 38.1 percent annual rate) for the previous six months. In addition, the strengths among the leading indicators have become less widespread in recent months.
- The Conference Board CEI for Japan was unchanged in June, following a small decline in May. Except for industrial production, all the coincident indicators advanced this month. The six-month growth rate of the coincident economic index has slowed to 1.2 percent (a 2.5 percent annual rate) for the period through June 2010, down from 3.0 percent (about a 6.0 percent annual rate) for the previous six months. At the same time, real GDP increased by 5.0 percent (annual rate) in the first quarter of 2010, up from 4.6 percent (annual rate) in the fourth quarter of 2009.
- The Conference Board LEI for Japan has declined for three consecutive months now, and its six-month growth rate has continued to slow. In addition, growth in The Conference Board CEI for Japan has also slowed in recent months. Taken together, the behavior of the composite indexes suggests that the economy will continue to recover, but the pace of the recovery will likely be more modest in the near term.

LEADING INDICATORS. Five of the ten components that make up The Conference Board LEI for Japan increased in June. The positive contributors to the index – in order from the largest positive contributor to the smallest – include the Tankan business conditions survey, the (inverted) business failures, interest rate spread, dwelling units started, and real money supply. The negative contributors – in order from the largest negative contributor to the smallest – include the new orders for machinery and construction component*, the six-month growth rate of labor productivity, stock prices, and the index of overtime worked. Real operating profits* were unchanged.

The next release is scheduled for Friday, September 10, 2010 at 10:00 A.M. (JST)

In the U.S – Thursday, September 9, 2010 at 9:00 P.M (ET)

With the decrease of 1.8 percent in June, The Conference Board LEI for Japan now stands at 100.3 (2004=100). Based on revised data, this index decreased 0.7 percent in May and decreased 0.1 percent in April. During the six-month span through June, the index increased 3.1 percent, and six of the ten components advanced (diffusion index, six-month span equals 65.0 percent).

COINCIDENT INDICATORS. Three of the four components that make up The Conference Board CEI for Japan increased in June. The positive contributors to the index – in order from the largest positive contributor to the smallest – include the real retail, wholesale, and manufacturing sales* component, wage and salary income, and number of employed persons. Industrial production declined in June.

Holding steady in June, The Conference Board CEI for Japan now stands at 98.4 (2004=100). Based on revised data, this index decreased 0.3 percent in May and increased 0.2 percent in April. During the six-month span through June, the index increased 1.2 percent, and three of the four components advanced (diffusion index, six-month span equals 75.0 percent).

FOR TABLES AND CHARTS, SEE BELOW

DATA AVAILABILITY AND NOTES. The data series used to compute **The Conference Board Leading Economic Index**[®] (LEI) for Japan and **The Conference Board Coincident Economic Index**[®] (CEI) for Japan reported in this release are those available “as of” 5:00 P.M. ET August 4, 2010. Some series are estimated as noted below.

* The series in The Conference Board LEI that are based on our estimates are real operating profits and new orders for machinery. The series in The Conference Board CEI that is based on our estimates is real manufacturing sales.

THE CYCLICAL INDICATOR APPROACH. The composite economic indexes are the key elements in an analytic system designed to signal peaks and troughs in the business cycle. The leading and coincident economic indexes are essentially composite averages of several individual leading or coincident economic indicators. (See page 3 for details.) They are constructed to summarize and reveal common turning point patterns in economic data in a clearer and more convincing manner than any individual component—primarily because they smooth out some of the volatility of individual components.

Historically, the cyclical turning points in the leading economic index have occurred before those in aggregate economic activity, while the cyclical turning points in the coincident economic index have occurred at about the same time as those in aggregate economic activity.

Japan Composite Economic Indexes: Components and Standardization Factors

<u>Leading Economic Index</u>	<u>Factor</u>
1 Operating Profits	0.0608
2 Dwelling Units Started	0.0349
3 Business Failures	0.0618
4 Index of Overtime Worked	0.0987
5 Stock Prices (TOPIX)	0.0380
6 Six Month Growth Rate of Labor Productivity	0.1209
7 Tankan Business Conditions Survey	0.0875
8 Money Supply	0.2809
9 Yield Spread	0.1668
10 New Orders for Machinery and Construction	0.0497
 <u>Coincident Economic Index</u>	
1 Number of Employed Persons	0.5520
2 Industrial Production	0.1120
3 Wage and Salary Income	0.1720
4 Real Retail, Wholesale, and Manufacturing Sales	0.1640

Notes:

The component factors are inversely related to the standard deviation of the month-to-month changes in each component. They are used to equalize the volatility of the contribution from each component and are “normalized” to sum to 1.

These factors were revised effective on the release for January 2010, and all historical values for the two composite economic indexes were revised at this time to reflect the changes. (Under normal circumstances, updates to the leading and coincident economic indexes only incorporate revisions to data over the past six months.) The factors above for The Conference Board LEI were calculated using the September 1974 to December 2008 period as the sample period for measuring volatility. Separate sets of factors for the March 1974 to August 1974 period, the February 1973 to February 1974 period, and February 1965 to January 1973 period, are available upon request. The factors above for The Conference Board CEI were calculated using the August 1978 to December 2008 period as the sample period. Separate sets of factors for the February 1970 to July 1978 period, and the February 1965 to January 1970 period are available upon request. These multiple sample periods are the result of different starting dates for the component data. When one or more components are missing, the other factors are adjusted proportionately to ensure that the total continues to sum to 1. For additional information on the standardization factors and the index methodology visit our Web site: www.conference-board.org/data/bci.cfm

The trend adjustment factors for The Conference Board LEI are -0.2127 (calculated over the 1992-2008 period) and -0.2218 (calculated over the 1965 – 1991 period).

To address the problem of lags in available data, those leading and coincident indicators that are not available at the time of publication are estimated using statistical imputation. An autoregressive model is used to estimate each component. The resulting indexes are constructed using real and estimated data, and will be revised as the data unavailable at the time of publication become available. Such monthly data revisions are now a regular part of the U.S. Business Cycle and Global Indicators program. The main advantage of this procedure is to utilize The Conference Board LEI the data such as bond yields, stock prices, and change in consumer confidence that are available sooner than other data on real aspects of the economy such as housing starts and new orders. Empirical research by The Conference Board suggests there are real gains in adopting this procedure to make all the indicator series as up-to-date as possible.

NOTICES

The 2010 schedule for **The Conference Board Leading Economic Index**[®] (LEI) news releases is:

July 2010 Data ... Thursday, September 09, 2010
August 2010 Data ... Thursday, October 07, 2010
September 2010 Data ... Tuesday, November 09, 2010
October 2010 Data ... Tuesday, December 07, 2010

All releases are at 10:00 A.M. JST (following day), 8:00 P.M. (9:00 P.M. EST) ET

ABOUT THE CONFERENCE BOARD

The Conference Board is a global, independent business membership and research association working in the public interest. Our mission is unique: to provide the world's leading organizations with the practical knowledge they need to improve their performance and better serve society. The Conference Board is a non-advocacy, not-for-profit entity holding 501 (c) (3) tax-exempt status in the U.S. For additional information about The Conference Board and how it can meet your needs, visit our website at www.conference-board.org.

AVAILABLE FROM THE CONFERENCE BOARD:

Japan Business Cycle Indicators Internet Subscription *(Includes monthly release, data, charts and commentary)*

\$ 565 (for TCB members)/\$715 (for non-TCB members) per year (1 user)

Individual Data Series

\$ 45 (for TCB members)/\$50 (for non-TCB members) per series downloaded

Monthly BCI Report

(Sample available at <http://www.conference-board.org/publications/publicationdetail.cfm?publicationid=852>)

\$ 230 (for TCB members)/\$285 (for non-TCB members) per year

BCI Handbook (published 2001)

\$ 25

Table 1.--Summary of Japan Composite Economic Indexes

	2009							2010
	Dec	Jan	Feb	Mar	Apr	May	Jun	
Leading index	97.3	99.5	100.5	102.9 p	102.8 p	102.1 p	100.3 p	
Percent change	1.9	2.3	1.0	2.4 p	-0.1 p	-0.7 p	-1.8 p	
Diffusion index	85.0	70.0	60.0	90.0	50.0	55.0	55.0	
Coincident index	97.2	98.5	98.3	98.5 p	98.7 p	98.4 p	98.4 p	
Percent change	0.6	1.3	-0.2	0.2 p	0.2 p	-0.3 p	0.0 p	
Diffusion index	100.0	100.0	25.0	75.0	75.0	25.0	75.0	
	Jun to	Jul to	Aug to	Sep to	Oct to	Nov to	Dec to	
	Dec	Jan	Feb	Mar	Apr	May	Jun	
Leading index								
Percent change	17.5	16.2	14.2	13.3 p	10.3 p	6.9 p	3.1 p	
Diffusion index	85.0	85.0	80.0	90.0	90.0	90.0	65.0	
Coincident index								
Percent change	3.0	3.7	3.0	2.8 p	2.5 p	1.9 p	1.2 p	
Diffusion index	100.0	100.0	100.0	87.5	75.0	75.0	75.0	

p Preliminary. r Revised (noted only for index levels and one-month percent changes).

CALCULATION NOTE: The diffusion indexes measure the proportion of the components that are rising. Components that rise more than 0.05 percent are given a value of 1.0, components that change less than 0.05 percent are given a value of 0.5, and components that fall more than 0.05 percent are given a value of 0.0.
