

THE CONFERENCE BOARD

FOR RELEASE: 10:00 A.M. KST, WEDNESDAY, JUNE 17, 2009

The Conference Board®
Korea Business Cycle IndicatorsSM
**THE CONFERENCE BOARD LEADING ECONOMIC INDEX™
(LEI) FOR KOREA**
AND RELATED COMPOSITE ECONOMIC INDEXES FOR APRIL 2009

The Conference Board Leading Economic Index™ (LEI) for Korea increased 2.1 percent and **The Conference Board Coincident Economic Index™ (CEI)** increased 0.6 percent in April.

- The Conference Board LEI for Korea increased sharply in April, the third consecutive gain. Large positive contributions from real exports, stock prices, index of inventories to shipments (inverted), and letter of credit arrivals more than offset a decline in private construction orders. With this month's gain, the six-month change in the index has become less negative at -3.6 percent (about a -7.1 percent annual rate) in the period through April, up from a -19.4 percent annual rate in December 2008. Moreover, the strengths and weaknesses among the leading indicators have become balanced during this period.
- The Conference Board CEI for Korea, a measure of current economic activity, also increased in April. Industrial production has risen sharply for three straight months through April, and wholesale and retail trade continued contributing positively to the index this month. The six-month change in the index has become less negative at -1.0 percent (a -2.0 percent annual rate) in the period through April, up from a -7.7 percent annual rate at the end of last year. At the same time, real GDP grew at a 0.5 percent annual rate in the first quarter of 2009, up from the 18.8 percent annual rate of decline in the fourth quarter of 2008.
- After declining sharply in late 2008, The Conference Board LEI for Korea has risen for three consecutive months. In addition, The Conference Board CEI for Korea has also increased this year. Taken together, the recent improvement in both composite economic indexes point to stabilization in the pace of the downturn in economic activity, and, if sustained, a resumption in growth late this year. However, the expansion in economic activity is likely to remain weak in the near term.

LEADING INDICATORS. Six of the seven components that make up The Conference Board LEI for Korea increased in April. The positive contributors – from the largest positive contributor to the smallest – were real exports FOB, stock prices, the (inverted) index of inventories to shipments, letter of credit arrivals, the (inverted) yield of government public bonds, and value of machinery orders. Private construction orders declined in April.

With the 2.1 percent increase in April, The Conference Board LEI for Korea now stands at 103.4 (2004=100). Based on revised data, this index increased 0.3 percent in March and increased 0.9 percent in February. During the six-month span through April, the leading economic index decreased 3.6 percent, with three of the seven components advancing (diffusion index, six-month span equals 50.0 percent).

The next release is scheduled for Wednesday, July 15, 2009 at 10:00 A.M. (KST)
In the U.S – Tuesday, July 14, 2009 at 9:00 P.M (ET)

COINCIDENT INDICATORS. Three of the four components that make up The Conference Board CEI for Korea increased in April. The positive contributors– in order from the largest positive contributor to the smallest – were industrial production, the wholesale and retail sales component, and total employment. Monthly cash earnings* declined in April.

With the 0.6 percent increase in April, The Conference Board CEI for Korea now stands at 106.6 (2004=100). Based on revised data, this index increased 0.9 percent in March and increased 0.5 percent in February. During the six-month span through April, the coincident economic index decreased 1.0 percent, with one of the four components advancing (diffusion index, six-month span equals 25.0 percent).

FOR TABLES AND CHARTS, SEE BELOW

DATA AVAILABILITY. The data series used to compute **The Conference Board Leading Economic Index™** (LEI) and **The Conference Board Coincident Economic Index™** (CEI) for Korea reported in this release are those available “as of” 10 A.M. (ET) on June 12, 2009.

* The series in the coincident economic index based on The Conference Board’s estimates is monthly cash earnings. There is no forecasted series in the leading economic index.

THE CYCLICAL INDICATOR APPROACH. The composite economic indexes are the key elements in an analytic system designed to signal peaks and troughs in the business cycle. The Conference Board LEI and CEI are essentially composite averages of several individual leading or coincident economic indicators. (See page 3 for details.) They are constructed to summarize and reveal common turning point patterns in economic data in a clearer and more convincing manner than any individual component—primarily because they smooth out some of the volatility of individual components.

Historically, the cyclical turning points in The Conference Board LEI have occurred before those in aggregate economic activity, while the cyclical turning points in The Conference Board CEI have occurred at about the same time as those in aggregate economic activity.

Korea Composite Indexes: Components and Standardization Factors

<u>Leading Economic Index</u>	<u>Factor</u>
1. Stock Prices	0.047
2. Value of Machinery Orders	0.033
3. Letter of Credit Arrivals	0.092
4. Index of Shipments to Inventories	0.086
5. Export FOB	0.105
6. Yield of Government Public Bonds	0.611
7. Private Construction Orders	0.026

<u>Coincident Economic Index</u>	
1. Industrial Production	0.113
2. Wholesale and Retail Trade	0.124
3. Employment	0.652
4. Monthly Cash Earnings	0.111

Notes:

The component factors are inversely related to the standard deviation of the month-to-month changes in each component. They are used to equalize the volatility of the contribution from each component and are “normalized” to sum to 1.

These factors were revised effective on the release for January 2009, and all historical values for the two composite economic indexes were revised at this time to reflect the changes. (Under normal circumstances, updates to The Conference Board LEI and CEI only incorporate revisions to data over the past six months.) The factors above for The Conference Board LEI were calculated using 1996-2007 as the sample period for measuring volatility. A separate set of factors for the 1982-1996, 1980 – 1982, 1976-1979, and 1971-1976 periods, are available upon request. The factors above for The Conference Board CEI were calculated using 1970-2007 as the sample period. These multiple sample periods are the result of different starting dates for the component data. When one or more components is missing, the other factors are adjusted proportionately to ensure that the total continues to sum to 1. For additional information on the standardization factors and the index methodology visit our Web site: <http://www.conference-board.org/economics/bci/>.

The trend adjustment factors for The Conference Board LEI are 0.0295 (calculated from June 1980 to December 2007) and -0.7688 (calculated from January 1970 to May 1980).

To address the problem of lags in available data, those leading and coincident economic indicators that are not available at the time of publication are estimated using statistical imputation. An autoregressive model is used to estimate each component. The resulting indexes are constructed using real and estimated data, and will be revised as the data unavailable at the time of publication become available. Such monthly data revisions are now a regular part of the U.S. Business Cycle and Global Indicators program. The main advantage of this procedure is to utilize in The Conference Board LEI the data such as bond yields, stock prices, and change in consumer confidence that are available sooner than other data on real aspects of the economy such as housing starts and new orders. Empirical research by The Conference Board suggests there are real gains in adopting this procedure to make all the indicator series as up-to-date as possible.

NOTICES

The 2009 schedule for TCB's LEI for Korea news releases is:

May 2009 Data ... Tuesday, July 14, 2009
June 2009 Data ... Tuesday, August 11, 2009
July 2009 Data ... Tuesday, September 15, 2009
August 2009 Data ... Wednesday, October 14, 2009
September 2009 Data ... Thursday, November 12, 2009
October 2009 Data ... Thursday, December 10, 2009

All releases are at 10:00 A.M. KST (following day), 8:00 P.M. (9:00 P.M. EST) ET

ABOUT THE CONFERENCE BOARD

The Conference Board is a global, independent business-membership and research association working in the public interest. Our mission is unique: To provide the world's leading organizations with the practical knowledge they need to improve their performance AND better serve society. The Conference Board is a non-advocacy, not-for-profit entity holding 501 (c) (3) tax-exempt status in the United States. For additional information about The Conference Board and how it can meet your needs, visit our website at www.conference-board.org.

AVAILABLE FROM THE CONFERENCE BOARD

Korea Business Cycle Indicators Internet Subscription <i>(Includes monthly release, data, charts and commentary)</i>	\$ 635 per year (1 user)
Individual Data Series	\$ 35 per series downloaded
Monthly BCI Report <i>(Sample available at http://www.conference-board.org/publications/describeBCI.cfm)</i>	\$ 275 per year
BCI Handbook (published 2001)	\$ 20
Corporate Site License	contact Indicators Program at (212) 339-0330

Business Cycle Indicators for Australia, France, Germany, Japan, Korea, Mexico, Spain and the U.K. are available at \$635 per country per year (1 user). Discounts are available to Associates of The Conference Board and accredited academic institutions.

Table 1.--Summary of Korea Composite Economic Indexes

	2008						2009
	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.
Leading index	107.3	102.8	101.6 r	100.1	101.0 r	101.3	103.4
Percent change	-3.0	-4.2	-1.2 r	-1.5 r	0.9 r	0.3 r	2.1
Diffusion index	42.9	0.0	57.1	42.9	42.9	57.1	85.7
Coincident index	107.7	106.0 r	104.6 r	104.6 r	105.1 r	106.0 p	106.6 p
Percent change	-0.7	-1.6 r	-1.3 r	0.0	0.5 r	0.9 p	0.6 p
Diffusion index	12.5	25.0	25.0	50.0	25.0	75.0	62.5

	Apr to	May to	Jun to	Jul to	Aug to	Sep to	Oct to
	Oct	Nov	Dec	Jan	Feb	Mar	Apr
Leading index							
Percent change	-7.7	-10.8	-10.2 r	-12.5	-9.4 r	-8.4	-3.6
Diffusion index	0.0	0.0	14.3	28.6	42.9	28.6	50.0
Coincident index							
Percent change	-1.9	-3.3 r	-3.9 r	-4.6 r	-3.9 r	-2.3 p	-1.0 p
Diffusion index	25.0	12.5	0.0	0.0	0.0	0.0	25.0

p Preliminary. r Revised (noted only for index levels and one-month percent changes).

CALCULATION NOTE: The diffusion indexes measure the proportion of the components that are rising. Components that rise more than 0.05 percent are given a value of 1.0, components that change less than 0.05 percent are given a value of 0.5, and components that fall more than 0.05 percent are given a value of 0.0.
