THE CONFERENCE BOARD LEADING ECONOMIC INDEXTM (LEI) FOR SPAIN

AND RELATED COMPOSITE INDEXES FOR AUGUST 2009

BRUSSELS, October 13, 2009... The Conference Board Leading Economic IndexTM (LEI) for Spain increased 1.8 percent. The Conference Board Coincident Economic IndexTM (CEI) decreased 0.2 percent in August.

- The Conference Board LEI for Spain increased for the third consecutive month in August, and this month's increase was the largest since 1991. All six components increased, with the capital equipment component of industrial production and order books survey making the largest positive contributions. From February to August 2009, the leading economic index increased by 2.5 percent (about a 5.1 percent annual rate), a reversal from the 3.7 percent decline (about a -7.3 percent annual rate) from August 2008 to February 2009. In addition, the strengths among the leading indicators have remained widespread in recent months.
- The Conference Board CEI for Spain, a measure of current economic activity, declined again in August, with final household consumption* and industrial production (excluding construction) making the largest negative contributions. Between February and August 2009, the coincident economic index decreased by 2.0 percent (about a -4.0 percent annual rate), slower than the 5.7 percent decline (about a -11.0 percent annual rate) for the previous six months. Additionally, the weaknesses among the coincident indicators have become less widespread in recent months. At the same time, real GDP contracted at a 4.2 percent annual rate during the second quarter of 2009, following a decline of 6.2 percent annual rate during the first quarter.
- After trending downward for more than a year, The Conference Board LEI for Spain rose slightly during the second quarter before increasing sharply in July and August. As a result, the six-month growth rate reached its highest level since the first quarter of 2007. Meanwhile, The Conference Board CEI for Spain has been falling since its most recent peak in February 2008, though the rate of its decline has moderated considerably during the past few months. Taken together, the recent behavior of the composite economic indexes suggests that the pace of contraction will continue to moderate and economic activity may even improve in the months ahead.

<u>LEADING INDICATORS.</u> All six components that make up The Conference Board LEI for Spain increased in August. The positive contributors—in order from the largest positive contributor to the smallest—are the capital equipment component of industrial production, order books survey, job placings, the Spanish equity price index, the (inverted) long-term government bond yield and the Spanish contribution to Euro M2.

The next release is scheduled for Wednesday, November 11, 2009 at 10:00 A.M. (Madrid Time)

In the U.S. – November 11, 2009 at 4:00 A.M. (ET)

With the increase of 1.8 percent in August, The Conference Board LEI for Spain now stands at 109.1 (2004=100). Based on revised data, this index increased 0.9 percent in July and increased 0.3 percent in June. During the six-month span through August, the index increased 2.5 percent, and five of the six components advanced (diffusion index, six-month span equals 83.3 percent).

<u>COINCIDENT INDICATORS.</u> Two of the five components that make up The Conference Board CEI for Spain increased in August. The positive contributors — in order from the largest positive contributor to the smallest — are employment* and real imports*. Final household consumption*, industrial production (excluding construction) and the retail sales survey declined in August.

With the decrease of 0.2 percent in August, The Conference Board CEI for Spain now stands at 100.9 (2004=100). Based on revised data, this index decreased 0.1 percent in July and decreased 0.2 percent in June. During the six-month span through August, the index decreased 2.0 percent, and two of the five components advanced (diffusion index, six-month span equals 40.0 percent).

FOR TABLES AND CHARTS, SEE BELOW

<u>DATA AVAILABILITY</u>. The data series used to compute **The Conference Board Leading Economic Index** TM (LEI) for Spain and **The Conference Board Coincident Economic Index** TM (CEI) for Spain reported in the tables in this release are those available "as of" 10 A.M. (ET) October 8, 2009. Some series are estimated as noted below.

NOTES: Series in The Conference Board CEI for Spain based on our estimates include final household consumption, employment and real imports.

THE CYCLICAL INDICATOR APPROACH. The composite economic indexes are the key elements in an analytic system designed to signal peaks and troughs in the business cycle. The leading and coincident economic indexes are essentially composite averages of several individual leading or coincident indicators. (See page 3 for details.) They are constructed to summarize and reveal common turning point patterns in economic data in a clearer and more convincing manner than any individual component—primarily because they smooth out some of the volatility of individual components.

Historically, the cyclical turning points in The Conference Board LEI for Spain have occurred before those in aggregate economic activity, while the cyclical turning points in The Conference Board CEI for Spain have occurred at about the same time as those in aggregate economic activity.

Further explanations of the cyclical indicator approach and the composite economic index methodology appear in The Conference Board's *Business Cycle Indicators* report and website: http://www.conference-board.org/economics/bci/.

Spain Composite Economic Indexes: Components and Standardization Factors

Lea	<u>Factor</u>	
1	Comital Equipment Common and of Industrial Duadwation	0720
1.	Capital Equipment Component of Industrial Production	.0730
2.	Contribution to Euro M2	.1914
3.	Stock Price Index	.0278
4.	Long term Government Bond Yield	.5166
5.	Order Books Survey	.1215
6.	Job Placings	.0698
<u>Coi</u>	ncident Economic Index	
1.	Final Household Consumption	.3619
2.	Industrial Production, Excluding Construction	.2030
3.	Retail Sales Survey	.0346
4.	Real Imports	.0307
5.	Employment	.3698

Notes:

The component factors are inversely related to the standard deviation of the month-to-month changes in each component. They are used to equalize the volatility of the contribution from each component and are "normalized" to sum to 1.

These factors were revised effective on the release for January 2009, and all historical values for the two composite indexes were revised at this time to reflect the changes. (Under normal circumstances, updates to the leading and coincident economic indexes only incorporate revisions to data over the past six months.) The factors above for The Conference Board LEI for Spain were calculated using the October 1997 to December 2007 period as the sample period for measuring volatility. A separate set of factors for the February 1984 to September 1997 period, is available upon request. The factors above for The Conference Board CEI for Spain were calculated using the February 1995 to December 2007 period as the sample period. Separate sets of factors for the February 1984 to January 1985 period, the February 1985 to October 1994 period, and the November 1994 to January 1995 period are available upon request. These multiple sample periods are the result of different starting dates for the component data. When one or more components are missing, the other factors are adjusted proportionately to ensure that the total continues to sum to 1. For additional information on the standardization factors and the index methodology visit our website: http://www.conference-board.org/economics/bci.

The trend adjustment factor for The Conference Board LEI for Spain is 0.0187, calculated over the 1984-2007 period.

To address the problem of lags in available data, those leading and coincident indicators that are not available at the time of publication are estimated using statistical imputation. An autoregressive model is used to estimate each component. The resulting indexes are constructed using real and estimated data, and will be revised as the data unavailable at the time of publication become available. Such revisions are part of the monthly data revisions, now a regular part of the U.S. Business Cycle Indicators program. The main advantage of this procedure is to utilize in the leading economic index the data, such as stock prices, that are available sooner than other data on "real" aspects of the economy, such as new orders and changes in inventory. Empirical research by The Conference Board suggests there are real gains in adopting this procedure to make all the indicator series as up-to-date as possible.

NOTICES

The 2009 schedule for "The Conference Board Leading Economic IndexTM (LEI) for Spain" news release is:

September 2009 Data...... Wednesday, November 11, 2009 October 2009 Data..... Tuesday, December 15, 2009

All releases are at 10:00 A.M. (Madrid Time)

ABOUT THE CONFERENCE BOARD

The Conference Board is a global, independent business membership and research association working in the public interest. Our mission is unique: To provide the world's leading organizations with the practical knowledge they need to improve their performance *and* better serve society. The Conference Board is a non-advocacy, not-for-profit entity holding 501 (c) (3) tax-exempt status in the United States.

AVAILABLE FROM THE CONFERENCE BOARD

Spain Business Cycle Indicators Internet Subscription \$ 635 per year (1 user)

(Includes monthly release, data, charts and commentary)

Individual Data Series \$ 35 per series downloaded

Monthly BCI Report \$ 275 per year

(Sample available at http://www.conference-board.org/publications/describeBCI.cfm)

BCI Handbook (published 2001) \$ 20

Corporate Site License contact Indicators Program at (212) 339-0330

Business Cycle Indicators for Australia, France, Germany, Japan, Korea, Mexico, Spain and the U.K. are available at \$635 per country per year (1 user). Discounts are available to Associates of The Conference Board and accredited academic institutions.

CALCULATION NOTE: The diffusion indexes measure the proportion of

the components that are rising. Components that rise

more than 0.05 percent are given a value of 1.0, components that change less than 0.05 percent are given a value of 0.5, and components that fall more than 0.05 percent are given a value of 0.0.
