

FOR RELEASE: 10:00 A.M. ET, Monday, September 21, 2009

The Conference Board[®] U.S. Business Cycle Indicators[™] **THE CONFERENCE BOARD LEADING ECONOMIC INDEX**[™] (LEI) FOR THE UNITED STATES AND RELATED COMPOSITE ECONOMIC INDEXES FOR AUGUST 2009

The Conference Board Leading Economic IndexTM (LEI) for the U.S. increased 0.6 percent, **The Conference Board Coincident Economic Index**TM (CEI) remained unchanged and **The Conference Board Lagging Economic Index**TM (LAG) decreased 0.1 percent in August.

- The Conference Board LEI for the U.S. increased for the fifth consecutive month in August. Supplier deliveries, the interest rate spread and stock prices made large positive contributions to the index this month, more than offsetting the substantial negative contribution from real money supply. The sixmonth change in the index has picked up to 4.4 percent (about an 8.9 percent annual rate) in the period through August, up sharply from -2.4 percent (a -4.7 percent annual rate) for the previous six months. In addition, the strengths among the leading indicators have been widespread in recent months.
- The Conference Board CEI for the U.S. was unchanged in August, and July's flat reading was revised to a small increase due to an upward revision in industrial production. Between February and August 2009, the index fell 2.0 percent (about a -3.9 percent annual rate), slower than the decline of 3.8 percent (a -7.4 percent annual rate) for the previous six months. In August, the lagging economic index for the U.S. continued to decrease, and with the coincident economic index remaining unchanged, the coincident-to-lagging ratio increased again. Meanwhile, real GDP fell at a 1.0 percent annual rate in the second quarter, following a contraction of 6.4 percent annual rate for the first quarter of the year.
- After having fallen steadily since reaching a peak in July 2007, The Conference Board LEI for the U.S. has risen in the last five months, and its six-month growth rate has continued to accelerate. Meanwhile, the downtrend in The Conference Board CEI for the U.S. appears to have halted, with the index flat so far this quarter. All in all, the behavior of the composite indexes suggests that the recession is bottoming out and that economic activity will likely recover soon.

LEADING INDICATORS. Five of the ten indicators that make up The Conference Board LEI for the U.S. increased in August. The positive contributors – beginning with the largest positive contributor – were index of supplier deliveries (vendor performance), the interest rate spread, stock prices, building permits, and the index of consumer expectations. The negative contributors – beginning with the largest negative contributor – were real money supply*, average weekly initial claims for unemployment insurance (inverted), and manufacturers' new orders for nondefense capital goods*. Average weekly manufacturing hours and manufacturers' new orders for consumer goods and materials* held steady in August.

The Conference Board LEI for the U.S. now stands at 102.5 (2004=100). Based on revised data, this index increased 0.9 percent in July and increased 0.8 percent in June. During the six-month span through August, the leading economic index increased 4.4 percent, with eight out of ten components advancing (diffusion index, six-month span equals 80 percent).

<u>COINCIDENT INDICATORS.</u> Three of the four indicators that make up The Conference Board CEI for the U.S. increased in August. The positive contributors to the index – beginning with the largest positive contributor – were industrial production, personal income less transfer payments* and manufacturing and trade sales*. The negative contributor was employees on nonagricultural payrolls.

The Conference Board CEI for the U.S. now stands at 99.8 (2004=100). This index increased 0.1 percent in July and decreased 0.4 percent in June. During the six-month period through August, the coincident economic index decreased 2.0 percent, with none of the four components advancing (diffusion index, six-month span equals 0.0 percent).

LAGGING INDICATORS. The Conference Board LAG for the U.S. stands at 110.2 (2004=100) in August, with three of the seven components advancing. The positive contributors to the index – beginning with the largest positive contributor – were change in labor cost per unit of output*, change in CPI for services, and average duration of unemployment (inverted). The negative contributors – beginning with the largest negative contributor – were commercial and industrial loans outstanding*, ratio of consumer installment credit to personal income*, and ratio of manufacturing and trade inventories to sales*. The average prime rate charged by banks held steady in August. Based on revised data, the lagging economic index decreased 0.5 percent in July and decreased 0.9 percent in June.

DATA AVAILABILITY AND NOTES.

The data series used to compute **The Conference Board Leading Economic Index**TM (LEI) for the U.S., **The Conference Board Coincident Economic Index**TM (CEI) for the U.S. and **The Conference Board Lagging Economic Index**TM (LAG) for the U.S. and reported in the tables in this release are those available "as of" 12 Noon on September 18, 2009. Some series are estimated as noted below.

* Series in The Conference Board LEI for the U.S. based on our estimates are manufacturers' new orders for consumer goods and materials, manufacturers' new orders for nondefense capital goods, and the personal consumption expenditure used to deflate money supply. Series in The Conference Board CEI for the U.S. that are based on our estimates are personal income less transfer payments and manufacturing and trade sales. Series in The Conference Board LAG for the U.S. that are based on our estimates are inventories to sales ratio, consumer installment credit to income ratio, change in labor cost per unit of output, and the personal consumption expenditure used to deflate commercial and industrial loans outstanding.

The procedure used to estimate the current month's personal consumption expenditure deflator (used in the calculation of real money supply and commercial and industrial loans outstanding) now incorporates the current month's consumer price index when it is available before the release of The Conference Board LEI for the U.S.

THE CYCLICAL INDICATOR APPROACH. The composite economic indexes are the key elements in an analytic system designed to signal peaks and troughs in the business cycle. The leading, coincident, and lagging economic indexes are essentially composite averages of several individual leading, coincident, or lagging indicators. (See page 3 for details.) They are constructed to summarize and reveal common turning point patterns in economic data in a clearer and more convincing manner than any individual component—primarily because they smooth out some of the volatility of individual components.

Historically, the cyclical turning points in The Conference Board LEI for the U.S. have occurred before those in aggregate economic activity, while the cyclical turning points in The Conference Board CEI for the U.S. have occurred at about the same time as those in aggregate economic activity. The cyclical turning points in The Conference Board LAG for the U.S generally have occurred after those in aggregate economic activity.

Leading Economic Index Factor 1 Average weekly hours, manufacturing 0.2549 2 Average weekly initial claims for unemployment insurance 0.0307 3 Manufacturers' new orders, consumer goods and materials 0.0774 4 Index of supplier deliveries – vendor performance 0.0677 5 Manufacturers' new orders, nondefense capital goods 0.0180 6 Building permits, new private housing units 0.0270 7 Stock prices, 500 common stocks 0.0390 8 Money supply, M2 0.3580 9 Interest rate spread, 10-year Treasury bonds less federal funds 0.0991 10 Index of consumer expectations 0.0282 Coincident Economic Index 1 Employees on nonagricultural payrolls 0.5439 2 Personal income less transfer payments 0.1873 3 Industrial production 0.1497 4 Manufacturing and trade sales 0.1191 Lagging Economic Index 1 Average duration of unemployment 0.0371 2 Inventories to sales ratio, manufacturing and trade 0.1238 3 Labor cost per unit of output, manufacturing 0.0608 4 Average prime rate 0.2825 5 Commercial and industrial loans 0.1127 6 Consumer installment credit to personal income ratio 0.1872 7 Consumer price index for services 0.1959

U.S. Composite Economic Indexes: Components and Standardization Factors

Notes:

The component factors are inversely related to the standard deviation of the month-to-month changes in each component. They are used to equalize the volatility of the contribution from each component and are "normalized" to sum to 1. When one or more components are missing, the other factors are adjusted proportionately to ensure that the total continues to sum to 1.

These factors were revised effective on the release for January 2009, and all historical values for the three composite economic indexes were revised at this time to reflect the changes. (Under normal circumstances, updates to the leading, coincident, and lagging economic indexes only incorporate revisions to data over the past six months.) The factors for The Conference Board LEI for the U.S. were calculated using 1984-2007 as the sample period for measuring volatility. A separate set of factors for the 1959-1983 period is available upon request. The primary sample period for the coincident and lagging economic indexes was 1959-2007. For additional information on the standardization factors and the index methodology see: "Benchmark Revisions in the Composite Indexes," *Business Cycle Indicators* December 1997 and "Technical Appendix: Calculating the Composite Indexes" *Business Cycle Indicators* December 1996, or the Web site: www.conference-board.org/economics/bci.

The trend adjustment factor for The Conference Board LEI for the U.S is -0.0101, and the trend adjustment factor for The Conference Board LAG for the U.S is 0.1615.

To address the problem of lags in available data, those leading, coincident and lagging indicators that are not available at the time of publication are estimated using statistical imputation. An autoregressive model is used to estimate each unavailable component. The resulting indexes are therefore constructed using real and estimated data, and will be revised as the unavailable data during the time of publication become available. Such revisions are part of the monthly data revisions, now a regular part of the U.S. Business Cycle Indicators program. The main advantage of this procedure is to utilize in the leading economic index data such as stock prices, interest rate spread, and manufacturing hours that are available sooner than other data on real aspects of the economy such as manufacturers' new orders. Empirical research by The Conference Board suggests that there are real gains in adopting this procedure to make all the indicator series as up-to-date as possible.

The Conference Board Leading Economic Index[™] (LEI) for the U.S. news release schedule for 2009:

Thursday, October 22, 2009 Thursday, November 19, 2009 Thursday, December 17, 2009 for September 2009 data for October 2009 data for November 2009 data

All releases are at 10:00 AM ET.

About The Conference Board

The Conference Board is a global, independent business-membership and research association working in the public interest. Our mission is unique: To provide the world's leading organizations with the practical knowledge they need to improve their performance AND better serve society. The Conference Board is a non-advocacy, not-for-profit entity holding 501 (c) (3) tax-exempt status in the United States.

AVAILABLE FROM THE CONFERENCE BOARD

U.S. Business Cycle Indicators Interne	t Subscription \$ 635 per year (1 user)
(Includes monthly release, data, charts and	l commentary)
Individual Data Series	\$ 35 per series downloaded
Monthly BCI Report	\$ 275 per year
(Sample available at <u>http://www.conferenc</u>	<u>ce-board.org/publications/describeBCI.cfm</u>)
BCI Handbook (published 2001)	\$ 20
Corporate Site License	contact Indicators Program at (212) 339-0330

Business Cycle Indicators for France, Germany, Japan, Korea, Mexico, Spain and the U.K. are available at \$635 per country per year (1 user). Discounts are available to Associates of The Conference Board and accredited academic institutions.

Table 1 -- Summary of U.S. Composite Economic Indexes

p Preliminary. r Revised (noted only for index levels and one-month percent changes). c Corrected.

CALCULATION NOTE: The diffusion indexes measure the proportion of the components that are rising. Components that rise more than 0.05 percent are given a value of 1.0, components that change less than 0.05 percent are given a value of 0.5, and components that fall more than 0.05 percent are given a value of 0.0.

The full history of composite and diffusion indexes is available by subscription on our web site at www.conference-board.org/economics/bci

p Preliminary. r Revised. c Corrected.

* Inverted series; a negative change in this component makes a positive contribution to the index.

** Statistical Imputation (See page 3 for more details)

(c) Copyrighted. Series from private sources are provided through the courtesy of the compilers and are subject to their copyrights: Stock prices, Standard & Poor's Corporation; Index of consumer expectations, University of Michigan's Survey Research Center.

CALCULATION NOTE--The percent change in the index does not always equal the sum of the net contributions

of the individual components (because of rounding effects and base value differences).
