### **Recovery for *The Conference Board Leading Economic Index™* (LEI) for the Euro Area Continues to Slow**

**BRUSSELS, December 30, 2009...** The Conference Board Leading Economic Index™ (LEI) for the Euro Area increased 0.7 percent in November to 101.7 (2004 = 100), following a 0.6 percent increase in October and a 0.9 percent increase in September. Five of the eight components contributed positively to the index this month. However, its six-month growth rate has slowed in both October and November.

Said Jean-Claude Manini, The Conference Board Senior Economist for Europe: “The third consecutive slowdown in the rising trend of the LEI for the Euro Area reinforces concerns about a fragile recovery. The weakening in the confidence indicators behind this slowing suggests that the current recovery of economic activity in the short term may be too weak to stabilize employment and current economic conditions.”

The Conference Board LEI for the Euro Area has increased by 10.8 percent during 2009 after falling more than 15.0 percent between June 2007 and December 2008. Meanwhile, **The Conference Board Coincident Economic Index™** (CEI) for the Euro Area, a measure of current economic activity, declined by 0.1 percent in November, falling to 101.4 (2004 = 100), according to preliminary estimates\*, after decreasing by 0.2 percent in both October and September. The rate of decline for The Conference Board CEI for the Euro Area has slowed substantially during the past six months.

#### **The Conference Board LEI for the Euro Area has Grown More Slowly in Recent Months**

Note: Shaded areas represent recessions in the Euro Area as determined by The Conference Board

LEI Peak: June 2007

CEI Peak: Feb 2008

Real GDP Peak: Q1 2008

The Conference Board LEI for the Euro Area aggregates eight economic indicators that measure activity in the Euro Area as a whole (rather than indicators of individual member countries), each of which has proven accurate on its own. Aggregating individual indicators into a composite index filters out so-called “noise” to show underlying trends more clearly.

### **About The Conference Board Leading Economic Index™ (LEI) for the Euro Area**

**The Conference Board Leading Economic Index™** for the Euro Area was launched in January 2009. Plotted back to 1987, this index has successfully signaled turning points in the business cycle of the bloc of countries that now constitute the Euro Area, defined by the common currency zone.

The Conference Board currently produces leading economic indexes for nine other individual countries, including the U.S., the U.K., Germany, France, Spain, Japan, Australia, Korea and Mexico.

The eight components of **The Conference Board Leading Economic Index™** for the Euro Area include:

Economic Sentiment Index (source: European Commission DG-ECFIN)

Index of Residential Building Permits Granted (source: Eurostat)

Index of Capital Goods New Orders (source: Eurostat)

Dow Jones EURO STOXX® Index (source: STOXX Limited)

Money Supply (M2) (source: European Central Bank)

Interest Rate Spread (source: ECB)

Eurozone Manufacturing Purchasing Managers' Index (source: Markit Economics)

Eurozone Service Sector Future Business Activity Expectations Index (source: Markit Economics)

<http://www.conference-board.org/economics/indicators.cfm>

\* Series in The Conference Board LEI for the Euro Area that are based on The Conference Board estimates are real money supply, residential building permits and new orders of capital goods. All series in The Conference Board CEI for the Euro Area are based on The Conference Board estimates (employment, industrial production, retail trade and manufacturing turnover).

### **About The Conference Board**

The Conference Board is a global, independent business membership and research association working in the public interest. Our mission is unique: To provide the world's leading organizations with the practical knowledge they need to improve their performance *and* better serve society. The Conference Board is a non-advocacy, not-for-profit entity holding 501 (c) (3) tax-exempt status in the United States.

Next month's release will incorporate annual benchmark revisions to the composite indexes, which bring them up-to-date with revisions in the source data. These revisions do not change the cyclical properties of the indexes. The indexes are updated throughout the year, but only for the previous six months. Data revisions that fall outside of the moving six-month window are not incorporated until the benchmark revision is made and the entire histories of the indexes are recomputed. As a result, the revised indexes will no longer be directly comparable to those issued prior to the benchmark revision.
