

FOR RELEASE: 10:00 A.M. KST, WEDNESDAY, JUNE 16, 2010

The Conference Board[®]
Korea Business Cycle IndicatorsSM

THE CONFERENCE BOARD LEADING ECONOMIC INDEX® (LEI) FOR KOREA

AND RELATED COMPOSITE ECONOMIC INDEXES FOR APRIL 2010

The Conference Board Leading Economic Index[®] (LEI) for Korea increased 0.2 percent and The Conference Board Coincident Economic Index[®] (CEI) for Korea increased 0.5 percent in April.

- The Conference Board LEI for Korea increased again in April. Positive contributions from exports, letter of credit arrivals, machinery orders, and financial indicators again more than offset large negative contributions from private construction orders and the (inverted) index of inventories to shipments. The leading economic index grew by 4.7 percent (about a 9.7 percent annual rate) from October 2009 to April 2010, down slightly from 5.8 percent (about an 11.9 percent annual rate) for the previous six months. However, the strengths among the leading indicators have remained widespread in recent months.
- The Conference Board CEI for Korea, a measure of current economic activity, also increased in April. However, there were downward revisions to the index levels in the past several months, as actual data for monthly cash earnings became available. A significant gain in total employment more than offset declines in the wholesale and retail sales component and industrial production in April. Despite this month's gain, the six-month growth in the coincident economic index has moderated to 1.6 percent (about a 3.3 percent annual rate) for the period through April, down from 2.7 percent (about a 5.5 percent annual rate) for the previous six months. At the same time, real GDP grew at an 8.8 percent annual rate in the first quarter of 2010, above the 6.9 percent average annual rate of increase in the second half of last year.
- The Conference Board LEI for Korea has been generally rising for more than a year now, although its six-month growth rate has moderated somewhat this year. At the same time, The Conference Board CEI for Korea has been on a slightly rising trend in recent months, after growing rapidly in 2009. Taken together, the current behavior of the composite indexes and their components suggests that the economy will continue to grow, albeit at a modest pace in the near term.

<u>LEADING INDICATORS</u>. Five of the seven components that make up The Conference Board LEI for Korea increased in April. The positive contributors – from the largest positive contributor to the smallest – were real exports FOB, stock prices, letter of credit arrivals, value of machinery orders, and the (inverted) yield of government public bonds. The negative contributors were private construction orders and the (inverted) index of inventories to shipments.

With the 0.2 percent increase in April, The Conference Board LEI for Korea now stands at 115.1 (2004=100). Based on revised data, this index increased 0.3 percent in March and increased 0.4 percent in February. During the six-month span through April, the leading economic index increased 4.7 percent, with five of the seven components advancing (diffusion index, six-month span equals 85.7 percent).

The next release is scheduled for Wednesday, July 14, 2010 at 10:00 A.M. (KST) *In the U.S* – Tuesday, July 13, 2009 at 9:00 P.M (ET)

<u>COINCIDENT INDICATORS.</u> Two of the four components that make up The Conference Board CEI for Korea increased in April. The positive contributors were total employment and monthly cash earnings. The wholesale and retail sales component and industrial production declined in April.

With the 0.5 percent increase in April, The Conference Board CEI for Korea now stands at 111.5 (2004=100). Based on revised data, this index decreased 0.1 percent in March and increased 1.6 percent in February. During the six-month span through April, the coincident economic index increased 1.6 percent, with two of the four components advancing (diffusion index, six-month span equals 50.0 percent).

FOR TABLES AND CHARTS, SEE BELOW

<u>DATA AVAILABILITY.</u> The data series used to compute **The Conference Board Leading Economic Index**[®] (LEI) and **The Conference Board Coincident Economic Index**[®] (CEI) for Korea reported in this release are those available "as of" 10 A.M. (ET) on June 14, 2010.

* The series in the coincident economic index based on The Conference Board's estimates is monthly cash earnings. There is no forecasted series in the leading economic index.

THE CYCLICAL INDICATOR APPROACH. The composite economic indexes are the key elements in an analytic system designed to signal peaks and troughs in the business cycle. The Conference Board LEI and CEI are essentially composite averages of several individual leading or coincident economic indicators. (See page 3 for details.) They are constructed to summarize and reveal common turning point patterns in economic data in a clearer and more convincing manner than any individual component—primarily because they smooth out some of the volatility of individual components.

Historically, the cyclical turning points in The Conference Board LEI have occurred before those in aggregate economic activity, while the cyclical turning points in The Conference Board LEI have occurred at about the same time as those in aggregate economic activity.

Korea Composite Indexes: Components and Standardization Factors

Lea	ading Economic Index	<u>Factor</u>
1.	Stock Prices	0.046
2.	Value of Machinery Orders	0.031
3.	Letter of Credit Arrivals	0.088
4.	Index of Shipments to Inventories	0.086
5.	Export FOB	0.102
6.	Yield of Government Public Bonds	0.621
7.	Private Construction Orders	0.026
Coi	incident Economic Index	
1.	Industrial Production	0.127
2.	Wholesale and Retail Trade	0.126
3.	Employment	0.668
4.	Monthly Cash Earnings	0.079

Notes

The component factors are inversely related to the standard deviation of the month-to-month changes in each component. They are used to equalize the volatility of the contribution from each component and are "normalized" to sum to 1.

These factors were revised effective on the release for January 2010, and all historical values for the two composite economic indexes were revised at this time to reflect the changes. (Under normal circumstances, updates to The Conference Board LEI and CEI only incorporate revisions to data over the past six months.) The factors above for The Conference Board LEI were calculated using 1996-2008 as the sample period for measuring volatility. A separate set of factors for the 1982-1996, 1980 – 1982, 1976-1979, and 1971-1976 periods, are available upon request. The factors above for The Conference Board CEI were calculated using 1970-2008 as the sample period. These multiple sample periods are the result of different starting dates for the component data. When one or more components are missing, the other factors are adjusted proportionately to ensure that the total continues to sum to 1. For additional information on the standardization factors and the index methodology visit our Web site: http://www.conference-board.org/economics/bci/.

The trend adjustment factors for The Conference Board LEI are 0.0666 (calculated from June 1980 to December 2008) and -0.7671 (calculated from March 1971 to May 1980).

To address the problem of lags in available data, those leading and coincident economic indicators that are not available at the time of publication are estimated using statistical imputation. An autoregressive model is used to estimate each component. The resulting indexes are constructed using real and estimated data, and will be revised as the data unavailable at the time of publication become available. Such monthly data revisions are now a regular part of the U.S. Business Cycle and Global Indicators program. The main advantage of this procedure is to utilize in The Conference Board LEI the data such as bond yields, stock prices, and change in consumer confidence that are available sooner than other data on real aspects of the economy such as housing starts and new orders. Empirical research by The Conference Board suggests there are real gains in adopting this procedure to make all the indicator series as up-to-date as possible.

NOTICES

The 2010 schedule for **The Conference Board Leading Economic Index** (LEI) for Korea news releases is:

May 2010 Data ... Tuesday, July 13, 2010
June 2010 Data ... Tuesday, August 10, 2010
July 2010 Data ... Tuesday, September 14, 2010
August 2010 Data ... Wednesday, October 13, 2010
September 2010 Data ... Thursday, November 11, 2010
October 2010 Data ... Thursday, December 09, 2010

All releases are at 10:00 A.M. KST (following day), 8:00 P.M. (9:00 P.M. ET) ET

ABOUT THE CONFERENCE BOARD

The Conference Board is a global, independent business membership and research association working in the public interest. Our mission is unique: to provide the world's leading organizations with the practical knowledge they need to improve their performance and better serve society. The Conference Board is a non-advocacy, not-for-profit entity holding 501 (c) (3) tax-exempt status in the U.S. For additional information about The Conference Board and how it can meet your needs, visit our website at www.conference-board.org.

AVAILABLE FROM THE CONFERENCE BOARD

Korea Business Cycle Indicators Internet Subscription \$ 635 per year (1 user)

(Includes monthly release, data, charts and commentary)

Individual Data Series \$ 35 per series downloaded

Monthly BCI Report \$ 275 per year (Sample available at http://www.conference-board.org/publications/describeBCI.cfm)

PCI Handback (nublished 2001)

BCI Handbook (published 2001) \$ 20

Corporate Site License contact Indicators Program at (212) 339-0330

Business Cycle Indicators for China, Euro Area, France, Germany, Japan, Korea, Mexico, Spain, the U.K., and the U.S. are available at \$635 per country per year (1 user). Discounts are available to Associates of The Conference Board and accredited academic institutions.
