

#### FOR RELEASE: 10:00 A.M. KST, WEDNESDAY, JULY 14, 2010

## The Conference Board<sup>®</sup> Korea Business Cycle Indicators<sup>™</sup> THE CONFERENCE BOARD LEADING ECONOMIC INDEX<sup>®</sup> (LEI) FOR KOREA AND RELATED COMPOSITE ECONOMIC INDEXES FOR MAY 2010

The Conference Board Leading Economic Index<sup>®</sup> (LEI) for Korea increased 0.9 percent and The Conference Board Coincident Economic Index<sup>®</sup> (CEI) increased 0.5 percent in May.

- The Conference Board LEI for Korea increased again in May. Large positive contributions from private construction orders and value of machinery orders more than offset negative contributions from stock prices, letter of credit arrivals, the (inverted) index of inventories to shipments, and the (inverted) bond yield. The six-month growth rate of the leading economic index has continued to slow, to 3.9 percent (about an 8.0 percent annual rate) from November 2009 to May 2010, down from 7.6 percent (about a 15.7 percent annual rate) for the previous six months. However, the strengths among the leading indicators have remained widespread in recent months.
- The Conference Board CEI for Korea, a measure of current economic activity, also increased in May. Substantial gains in total employment and industrial production more than offset the small declines in the other components. The six-month growth in the coincident economic index has also slowed, to 1.4 percent (about a 2.7 percent annual rate) for the period through May, down from 2.8 percent (about a 5.7 percent annual rate) for the previous six months. At the same time, real GDP grew at an 8.8 percent annual rate in the first quarter of 2010, above the 6.9 percent average annual rate of increase in the second half of last year.
- The Conference Board LEI for Korea has continued its upward trend, which started in early 2009. However, its six-month growth rate has slowed this year. At the same time, The Conference Board CEI for Korea has also remained on a rising trend, but with its growth rate slowing in recent months. Taken together, the current behavior of the composite indexes and their components suggests that the economy will continue to grow, albeit at a modest pace in the near term.

<u>LEADING INDICATORS.</u> Three of the seven components that make up The Conference Board LEI for Korea increased in May. The positive contributors – from the largest positive contributor to the smallest – were private construction orders, value of machinery orders, and real exports FOB. Negative contributors – from the largest negative contributor to the smallest – were stock prices, letter of credit arrivals, the (inverted) index of inventories to shipments, and the (inverted) yield of government public bonds.

With the 0.9 percent increase in May, The Conference Board LEI for Korea now stands at 116.5 (2004=100). Based on revised data, this index increased 0.4 percent in April and increased 0.3 percent in March. During the six-month span through May, the leading economic index increased 3.9 percent, with five of the seven components advancing (diffusion index, six-month span equals 71.4 percent).

### The next release is scheduled for Wednesday, August 11, 2010 at 10:00 A.M. (KST) In the U.S – Tuesday, August 10, 2010 at 9:00 P.M (ET)

<u>COINCIDENT INDICATORS.</u> Two of the four components that make up The Conference Board CEI for Korea increased in May. The positive contributors were total employment and industrial production. Monthly cash earnings and the wholesale and retail sales component declined in May.

With the 0.5 percent increase in May, The Conference Board CEI for Korea now stands at 112.1 (2004=100). Based on revised data, this index increased 0.5 percent in April and remained unchanged in March. During the six-month span through May, the coincident economic index increased 1.4 percent, with two of the four components advancing (diffusion index, six-month span equals 50.0 percent).

#### FOR TABLES AND CHARTS, SEE BELOW

<u>DATA AVAILABILITY</u>. The data series used to compute **The Conference Board Leading Economic Index**<sup>®</sup> (LEI) and **The Conference Board Coincident Economic Index**<sup>®</sup> (CEI) for Korea reported in this release are those available "as of" 10 A.M. (ET) on July 12, 2010.

\* The series in the coincident economic index based on The Conference Board's estimates is monthly cash earnings. There is no forecasted series in the leading economic index.

Website: http://www.conference-board.org/data/bci.cfm

<u>THE CYCLICAL INDICATOR APPROACH.</u> The composite economic indexes are the key elements in an analytic system designed to signal peaks and troughs in the business cycle. The Conference Board LEI and CEI are essentially composite averages of several individual leading or coincident economic indicators. (See page 3 for details.) They are constructed to summarize and reveal common turning point patterns in economic data in a clearer and more convincing manner than any individual component— primarily because they smooth out some of the volatility of individual components.

Historically, the cyclical turning points in The Conference Board LEI have occurred before those in aggregate economic activity, while the cyclical turning points in The Conference Board CEI have occurred at about the same time as those in aggregate economic activity.

#### Korea Composite Indexes: Components and Standardization Factors

Lea	ding Economic Index	Factor
1.	Stock Prices	0.046
2.	Value of Machinery Orders	0.031
3.	Letter of Credit Arrivals	0.088
4.	Index of Shipments to Inventories	0.086
5.	Export FOB	0.102
6.	Yield of Government Public Bonds	0.621
7.	Private Construction Orders	0.026
Coi	ncident Economic Index	
1.	Industrial Production	0.127
2.	Wholesale and Retail Trade	0.126
3.	Employment	0.668
4.	Monthly Cash Earnings	0.079

#### Notes:

The component factors are inversely related to the standard deviation of the month-to-month changes in each component. They are used to equalize the volatility of the contribution from each component and are "normalized" to sum to 1.

These factors were revised effective on the release for January 2010, and all historical values for the two composite economic indexes were revised at this time to reflect the changes. (Under normal circumstances, updates to The Conference Board LEI and CEI only incorporate revisions to data over the past six months.) The factors above for The Conference Board LEI were calculated using 1996-2008 as the sample period for measuring volatility. A separate set of factors for the 1982-1996, 1980 – 1982, 1976-1979, and 1971-1976 periods, are available upon request. The factors above for The Conference Board CEI were calculated using 1970-2008 as the sample period. These multiple sample periods are the result of different starting dates for the component data. When one or more components are missing, the other factors are adjusted proportionately to ensure that the total continues to sum to 1. For additional information on the standardization factors and the index methodology visit our Web site: www.conference-board.org/data/bci.cfm

The trend adjustment factors for The Conference Board LEI are 0.0666 (calculated from June 1980 to December 2008) and -0.7671 (calculated from March 1971 to May 1980).

To address the problem of lags in available data, those leading and coincident economic indicators that are not available at the time of publication are estimated using statistical imputation. An autoregressive model is used to estimate each component. The resulting indexes are constructed using real and estimated data, and will be revised as the data unavailable at the time of publication become available. Such monthly data revisions are now a regular part of the U.S. Business Cycle and Global Indicators program. The main advantage of this procedure is to utilize in The Conference Board LEI the data such as bond yields, stock prices, and change in consumer confidence that are available sooner than other data on real aspects of the economy such as housing starts and new orders. Empirical research by The Conference Board suggests there are real gains in adopting this procedure to make all the indicator series as up-to-date as possible.

### NOTICES

The 2010 schedule for **The Conference Board Leading Economic Index**<sup>®</sup> (LEI) for Korea news releases is:

June 2010 Data ... Tuesday, August 10, 2010 July 2010 Data ... Tuesday, September 14, 2010 August 2010 Data ... Wednesday, October 13, 2010 September 2010 Data ... Thursday, November 11, 2010 October 2010 Data ... Thursday, December 09, 2010

All releases are at 10:00 A.M. KST (following day), 8:00 P.M. (9:00 P.M. EST) ET

#### ABOUT THE CONFERENCE BOARD

The Conference Board is a global, independent business membership and research association working in the public interest. Our mission is unique: to provide the world's leading organizations with the practical knowledge they need to improve their performance and better serve society. The Conference Board is a non-advocacy, not-for-profit entity holding 501 (c) (3) tax-exempt status in the U.S. For additional information about The Conference Board and how it can meet your needs, visit our website at www.conference-board.org.

## The Conference Board Korea Business Cycle Indicators

p Preliminary. r Revised (noted only for index levels and one-month percent changes).

CALCULATION NOTE: The diffusion indexes measure the proportion of the components that are rising. Components that rise more than 0.05 percent are given a value of 1.0, components that change less than 0.05 percent are given a value of 0.5, and components that fall more than 0.05 percent are given a value of 0.0.
