

THE CONFERENCE BOARD

FOR RELEASE: 10:00 A.M. JST, FRIDAY, SEPTEMBER 11, 2009

The Conference Board®
Japan Business Cycle IndicatorsSM
**THE CONFERENCE BOARD LEADING ECONOMIC INDEX™ (LEI)
FOR JAPAN
AND RELATED COMPOSITE ECONOMIC INDEXES FOR JULY 2009**

The Conference Board Leading Economic Index™ (LEI) for Japan increased 3.1 percent and **The Conference Board Coincident Economic Index™ (CEI)** increased 0.5 percent in July.

- The Conference Board LEI for Japan increased sharply again in July, and there were substantial upward revisions to the index in the past four months as actual data for second quarter operating profits became available. The strengths among the leading indicators were widespread this month, with the six-month growth rate of productivity, index of overtime worked, business failures (inverted), and the Tankan business conditions survey making large positive contributions. In July, the six-month change in the leading economic index became positive for the first time since the end of 2006, increasing to 6.3 percent (about a 13.0 percent annual rate), a sharp reversal from the 21.7 percent decline (about a -38.7 percent annual rate) in the beginning of this year. Moreover, the strengths among the leading indicators became more widespread than the weaknesses in the last six months.
- The Conference Board CEI for Japan increased slightly again in July, and there were also upward revisions to the index in recent months as actual data for second quarter manufacturing sales became available. Industrial production continued to grow strongly this month, while wage and salary income improved at a more modest pace. The six-month decline in the index has slowed to 1.5 percent (a -2.9 percent annual rate), from 6.9 percent (about a -13.3 percent annual rate) in the six-month period ending in January this year. However, the weaknesses among the coincident indicators have remained widespread in recent months. At the same time, real GDP grew at a 3.7 percent annual rate in the second quarter of 2009, the first increase in a year and a large improvement from the 11.7 percent contraction in the first quarter of 2009.
- The Conference Board LEI for Japan, after declining sharply from the third quarter of 2008, has risen strongly in the past five months, and its six-month growth rate has turned positive. Meanwhile, The Conference Board CEI for Japan also began to increase in the second quarter, and its six-month decline has slowed substantially in recent months. Taken together, the behavior of the composite indexes suggests that economic activity will likely continue to improve, albeit at a slow pace in the near term.

LEADING INDICATORS. Nine of the ten components that make up The Conference Board LEI for Japan increased in July. The positive contributors to the index – in order from the largest positive contributor to the smallest – include the six month growth rate of labor productivity, the index of overtime worked, real operating profits*, the Tankan business conditions survey, the (inverted) business failures, the new orders for machinery and construction component*, interest rate spread, real money supply, and stock prices. Dwelling units started remained unchanged in July.

The next release is scheduled for Friday, October 9, 2009 at 10:00 A.M. (JST)

In the U.S – Thursday, October 8, 2009 at 9:00 P.M (ET)

With the increase of 3.1 percent in July, The Conference Board LEI for Japan now stands at 80.8 (2004=100). Based on revised data, this index increased 2.3 percent in June and increased 3.4 percent in May. During the six-month span through July, the index increased 6.3 percent, and seven of the ten components advanced (diffusion index, six-month span equals 70.0 percent).

COINCIDENT INDICATORS. Three of the four components that make up The Conference Board CEI for Japan increased in July. The positive contributors to the index – in order from the largest positive contributor to the smallest – include industrial production, the retail, wholesale, and manufacturing sales* component, and wage and salary income. Number of employed persons declined in July.

With the increase of 0.5 percent in July, The Conference Board CEI for Japan now stands at 94.2 (2004=100). Based on revised data, this index increased 0.1 percent in June and increased 0.2 percent in May. During the six-month span through July, the index decreased 1.5 percent, and one of the four components advanced (diffusion index, six-month span equals 25.0 percent).

FOR TABLES AND CHARTS, SEE BELOW

DATA AVAILABILITY AND NOTES. The data series used to compute **The Conference Board Leading Economic Index™** (LEI) for Japan and **The Conference Board Coincident Economic Index™** (CEI) for Japan reported in this release are those available “as of” 5:00 P.M. ET September 9, 2009. Some series are estimated as noted below.

* The series in The Conference Board LEI that are based on our estimates are real operating profits and new orders for machinery. The series in The Conference Board CEI that is based on our estimates is real manufacturing sales.

THE CYCLICAL INDICATOR APPROACH. The composite economic indexes are the key elements in an analytic system designed to signal peaks and troughs in the business cycle. The leading and coincident economic indexes are essentially composite averages of several individual leading or coincident economic indicators. (See page 3 for details.) They are constructed to summarize and reveal common turning point patterns in economic data in a clearer and more convincing manner than any individual component—primarily because they smooth out some of the volatility of individual components.

Historically, the cyclical turning points in the leading economic index have occurred before those in aggregate economic activity, while the cyclical turning points in the coincident economic index have occurred at about the same time as those in aggregate economic activity.

Japan Composite Economic Indexes: Components and Standardization Factors

<u>Leading Economic Index</u>	<u>Factor</u>
1 Operating Profits	0.0751
2 Dwelling Units Started	0.0335
3 Business Failures	0.0594
4 Index of Overtime Worked	0.1056
5 Stock Prices (TOPIX)	0.0379
6 Six Month Growth Rate of Labor Productivity	0.1237
7 Tankan Business Conditions Survey	0.0851
8 Money Supply	0.2700
9 Yield Spread	0.1590
10 New Orders for Machinery and Construction	0.0507
 <u>Coincident Economic Index</u>	
1 Number of Employed Persons	0.5360
2 Industrial Production	0.1170
3 Wage and Salary Income	0.1670
4 Real Retail, Wholesale, and Manufacturing Sales	0.1800

Notes:

The component factors are inversely related to the standard deviation of the month-to-month changes in each component. They are used to equalize the volatility of the contribution from each component and are “normalized” to sum to 1.

These factors were revised effective on the release for January 2009, and all historical values for the two composite economic indexes were revised at this time to reflect the changes. (Under normal circumstances, updates to the leading and coincident economic indexes only incorporate revisions to data over the past six months.) The factors above for The Conference Board LEI were calculated using the September 1974 to December 2007 period as the sample period for measuring volatility. Separate sets of factors for the September 1974 to December 2007 period, the March 1974 to August 1974 period, the February 1973 to February 1974 period, and February 1965 to January 1973 period, are available upon request. The factors above for The Conference Board CEI were calculated using the August 1978 to December 2007 period as the sample period. Separate sets of factors for the August 1978 to December 2007 period, the February 1970 to July 1978 period, and the February 1965 to January 1970 period are available upon request. These multiple sample periods are the result of different starting dates for the component data. When one or more components is missing, the other factors are adjusted proportionately to ensure that the total continues to sum to 1. For additional information on the standardization factors and the index methodology visit our Web site: <http://www.conference-board.org/economics/bci>.

The trend adjustment factors for The Conference Board LEI are -0.2687 (calculated over the 1992-2007 period) and -0.2092 (calculated over the 1965 – 1991 period).

To address the problem of lags in available data, those leading and coincident indicators that are not available at the time of publication are estimated using statistical imputation. An autoregressive model is used to estimate each component. The resulting indexes are constructed using real and estimated data, and will be revised as the data unavailable at the time of publication become available. Such monthly data revisions are now a regular part of the U.S. Business Cycle and Global Indicators program. The main advantage of this procedure is to utilize The Conference Board LEI the data such as bond yields, stock prices, and change in consumer confidence that are available sooner than other data on real aspects of the economy such as housing starts and new orders. Empirical research by The Conference Board suggests there are real gains in adopting this procedure to make all the indicator series as up-to-date as possible.

NOTICES

The 2009 schedule for **The Conference Board Leading Economic Index™** (LEI) news releases is:

August 2009 Data ... Thursday, October 08, 2009
September 2009 Data ... Tuesday, November 10, 2009
October 2009 Data ... Tuesday, December 08, 2009

All releases are at 10:00 A.M. JST (following day), 8:00 P.M. (9:00 P.M. EST) ET

ABOUT THE CONFERENCE BOARD

The Conference Board is a global, independent business-membership and research association working in the public interest. Our mission is unique: To provide the world's leading organizations with the practical knowledge they need to improve their performance AND better serve society. The Conference Board is a non-advocacy, not-for-profit entity holding 501 (c) (3) tax-exempt status in the United States. For additional information about The Conference Board and how it can meet your needs, visit our website at www.conference-board.org.

AVAILABLE FROM THE CONFERENCE BOARD:

Japan Business Cycle Indicators Internet Subscription <i>(Includes monthly release, data, charts and commentary)</i>	\$ 635 per year (1 user)
Individual Data Series	\$ 35 per series downloaded
Monthly BCI Report <i>(Sample available at http://www.conference-board.org/publications/describeBCI.cfm)</i>	\$ 275 per year
BCI Handbook (published 2001)	\$ 20
Corporate Site License	contact Indicators Program at (212) 339-0330

Business Cycle Indicators for the U.S., France, Germany, Spain, Japan, Korea, Mexico, and the U.K., are available at \$635 per country per year (1 user). Discounts are available to Associates of The Conference Board and accredited academic institutions.

THESE DATA ARE FOR ANALYSIS PURPOSES ONLY. NOT FOR REDISTRIBUTION, PUBLISHING, DATABASING, OR PUBLIC POSTING WITHOUT EXPRESS WRITTEN PERMISSION.

Table 1.--Summary of Japan Composite Economic Indexes

	2009						
	Jan	Feb	Mar	Apr	May	Jun	Jul
Leading index	76.0	71.2	72.4 r	74.1 r	76.6 r	78.4 p	80.8 p
Percent change	-6.3	-6.3	1.7 r	2.3 r	3.4 r	2.3 p	3.1 p
Diffusion index	30.0	35.0	60.0	70.0	80.0	80.0	85.0
Coincident index	95.6	93.3	92.4 r	93.4 r	93.6 r	93.7 p	94.2 p
Percent change	-1.6	-2.4	-1.0 r	1.1 r	0.2 r	0.1 p	0.5 p
Diffusion index	50.0	0.0	25.0	50.0	50.0	75.0	87.5
	Jul to Jan	Aug to Feb	Sep to Mar	Oct to Apr	Nov to May	Dec to Jun	Jan to Jul
Leading index							
Percent change	-21.7	-25.6	-22.6 r	-17.6 r	-10.6 r	-3.3 p	6.3 p
Diffusion index	20.0	25.0	30.0	30.0	40.0	50.0	70.0
Coincident index							
Percent change	-6.9	-8.4	-8.8 r	-7.1 r	-5.5 r	-3.6 p	-1.5 p
Diffusion index	50.0	50.0	25.0	25.0	25.0	0.0	25.0

p Preliminary. r Revised (noted only for index levels and one-month percent changes).

CALCULATION NOTE: The diffusion indexes measure the proportion of the components that are rising. Components that rise more than 0.05 percent are given a value of 1.0, components that change less than 0.05 percent are given a value of 0.5, and components that fall more than 0.05 percent are given a value of 0.0.
