

THE CONFERENCE BOARD

FOR RELEASE: 10:00 A.M. KST, FRIDAY, FEBRUARY 12, 2010

The Conference Board®
Korea Business Cycle IndicatorsSM
**THE CONFERENCE BOARD LEADING ECONOMIC INDEX™
(LEI) FOR KOREA**
AND RELATED COMPOSITE ECONOMIC INDEXES FOR DECEMBER 2009

The Conference Board Leading Economic Index™ (LEI) for Korea increased 2.1 percent and **The Conference Board Coincident Economic Index™ (CEI)** for Korea increased 0.5 percent in December.

- The Conference Board LEI for Korea increased again in December, and it rose for nine of the twelve months in 2009. The strength in the leading economic index was very widespread this month, with all the components contributing positively to the index. With the gain in December, the leading economic index increased by 8.1 percent (about a 16.9 percent annual rate) in the second half of 2009, well above the 2.8 percent rate (about a 5.7 percent annual rate) for the previous six months ending in June. In addition, the strengths among the leading indicators have remained widespread in recent months.
- The Conference Board CEI for Korea, a measure of current economic activity, also increased in December. Industrial production continued to advance sharply, and the wholesale and retail sales component also made a large positive contribution to the index. Despite this month's gain, the six-month growth rate of the coincident economic index continued to slow, to 1.7 percent (about a 3.3 percent annual rate) in the second half of 2009, down sharply from 6.0 percent (about a 12.3 percent annual rate) for the previous six months. At the same time, real GDP growth also slowed substantially in the fourth quarter of the year, to 0.7 percent (annual rate) from the rapid increases of 13.6 percent in the third quarter and 11.0 percent in the second quarter of 2009.
- The Conference Board LEI for Korea continues to grow, and its six-month growth rate has picked up lately. At the same time, The Conference Board CEI for Korea has also continued to increase. However, its six-month growth rate has gradually slowed. Taken together, the current behavior of the composite indexes and their components suggests that the economic recovery will continue, but perhaps remain at a modest pace in the near term.

LEADING INDICATORS. All seven components that make up The Conference Board LEI for Korea increased in December. The positive contributors – from the largest positive contributor to the smallest – were real exports FOB, the (inverted) index of inventories to shipments, stock prices, private construction orders, letter of credit arrivals, value of machinery orders, and the (inverted) yield of government public bonds.

With the 2.1 percent increase in December, The Conference Board LEI for Korea now stands at 114.3 (2004=100). Based on revised data, this index increased 1.8 percent in November and remained unchanged in October. During the six-month span through December, the leading economic index increased 8.1 percent, with five of the seven components advancing (diffusion index, six-month span equals 71.4 percent).

The next release is scheduled for Friday, March 12, 2010 at 10:00 A.M. (KST)
In the U.S – Thursday, March 11, 2010 at 8:00 P.M (EST)

COINCIDENT INDICATORS. Three of the four components that make up The Conference Board CEI for Korea increased in December. The positive contributors— in order from the largest positive contributor to the smallest – were industrial production, the wholesale and retail sales component, and monthly cash earnings. Total employment declined.

With the 0.5 percent increase in December, The Conference Board CEI for Korea now stands at 110.4 (2004=100). Based on revised data, this index increased 0.4 percent in November and decreased 0.3 percent in October. During the six-month span through December, the coincident economic index increased 1.7 percent, with three of the four components advancing (diffusion index, six-month span equals 75.0 percent).

FOR TABLES AND CHARTS, SEE BELOW

DATA AVAILABILITY. The data series used to compute **The Conference Board Leading Economic Index™** (LEI) and **The Conference Board Coincident Economic Index™** (CEI) for Korea reported in this release are those available “as of” 10 A.M. (ET) on February 10, 2010.

* The series in the coincident economic index based on The Conference Board’s estimates is monthly cash earnings. There is no forecasted series in the leading economic index.

THE CYCLICAL INDICATOR APPROACH. The composite economic indexes are the key elements in an analytic system designed to signal peaks and troughs in the business cycle. The Conference Board LEI and CEI are essentially composite averages of several individual leading or coincident economic indicators. (See page 3 for details.) They are constructed to summarize and reveal common turning point patterns in economic data in a clearer and more convincing manner than any individual component— primarily because they smooth out some of the volatility of individual components.

Historically, the cyclical turning points in The Conference Board LEI have occurred before those in aggregate economic activity, while the cyclical turning points in The Conference Board CEI have occurred at about the same time as those in aggregate economic activity.

Korea Composite Indexes: Components and Standardization Factors

<u>Leading Economic Index</u>	<u>Factor</u>
1. Stock Prices	0.046
2. Value of Machinery Orders	0.031
3. Letter of Credit Arrivals	0.088
4. Index of Shipments to Inventories	0.086
5. Export FOB	0.102
6. Yield of Government Public Bonds	0.621
7. Private Construction Orders	0.026

<u>Coincident Economic Index</u>	
1. Industrial Production	0.127
2. Wholesale and Retail Trade	0.126
3. Employment	0.668
4. Monthly Cash Earnings	0.079

Notes:

The component factors are inversely related to the standard deviation of the month-to-month changes in each component. They are used to equalize the volatility of the contribution from each component and are “normalized” to sum to 1.

These factors were revised effective on the release for January 2010, and all historical values for the two composite economic indexes were revised at this time to reflect the changes. (Under normal circumstances, updates to The Conference Board LEI and CEI only incorporate revisions to data over the past six months.) The factors above for The Conference Board LEI were calculated using 1996-2008 as the sample period for measuring volatility. A separate set of factors for the 1982-1996, 1980 – 1982, 1976-1979, and 1971-1976 periods, are available upon request. The factors above for The Conference Board CEI were calculated using 1970-2008 as the sample period. These multiple sample periods are the result of different starting dates for the component data. When one or more components are missing, the other factors are adjusted proportionately to ensure that the total continues to sum to 1. For additional information on the standardization factors and the index methodology visit our Web site: <http://www.conference-board.org/economics/bci/>.

The trend adjustment factors for The Conference Board LEI are 0.0666 (calculated from June 1980 to December 2008) and -0.7671 (calculated from March 1971 to May 1980).

To address the problem of lags in available data, those leading and coincident economic indicators that are not available at the time of publication are estimated using statistical imputation. An autoregressive model is used to estimate each component. The resulting indexes are constructed using real and estimated data, and will be revised as the data unavailable at the time of publication become available. Such monthly data revisions are now a regular part of the U.S. Business Cycle and Global Indicators program. The main advantage of this procedure is to utilize in The Conference Board LEI the data such as bond yields, stock prices, and change in consumer confidence that are available sooner than other data on real aspects of the economy such as housing starts and new orders. Empirical research by The Conference Board suggests there are real gains in adopting this procedure to make all the indicator series as up-to-date as possible.

NOTICES

The 2010 schedule for TCB's LEI for Korea news releases is:

January 2010 Data ... Thursday, March 11, 2010
February 2010 Data ... Thursday, April 08, 2010
March 2010 Data ... Tuesday, May 11, 2010
April 2010 Data ... Tuesday, June 15, 2010
May 2010 Data ... Tuesday, July 13, 2010
June 2010 Data ... Tuesday, August 10, 2010
July 2010 Data ... Tuesday, September 14, 2010
August 2010 Data ... Wednesday, October 13, 2010
September 2010 Data ... Thursday, November 11, 2010
October 2010 Data ... Thursday, December 09, 2010

All releases are at 10:00 A.M. KST (following day), 8:00 P.M. (9:00 P.M. EST) ET

ABOUT THE CONFERENCE BOARD

The Conference Board is a global, independent business membership and research association working in the public interest. Our mission is unique: to provide the world's leading organizations with the practical knowledge they need to improve their performance and better serve society. The Conference Board is a non-advocacy, not-for-profit entity holding 501 (c) (3) tax-exempt status in the U.S. For additional information about The Conference Board and how it can meet your needs, visit our website at www.conference-board.org.

AVAILABLE FROM THE CONFERENCE BOARD

Korea Business Cycle Indicators Internet Subscription	\$ 635 per year (1 user)

Table 1.--Summary of Korea Composite Economic Indexes

	2009						
	Jun.	Jul.	Aug.	Sep.	Oct.	Nov.	Dec.
Leading index	105.7	107.1 r	107.1 r	109.9	109.9	111.9 r	114.3
Percent change	1.4	1.3 r	0.0	2.6 r	0.0	1.8 r	2.1
Diffusion index	57.1	64.3	57.1	92.9	50.0	71.4	92.9
Coincident index	108.6	108.7	108.8	109.7	109.4 p	109.8 p	110.4 p
Percent change	0.9	0.1	0.1	0.8	-0.3 p	0.4 p	0.5 p
Diffusion index	75.0	50.0	62.5	87.5	50.0	50.0	75.0

	Dec to	Jan to	Feb to	Mar to	Apr to	May to	Jun to
	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Leading index							
Percent change	2.8	5.9 r	5.4 r	7.5	5.8	7.4 r	8.1
Diffusion index	85.7	71.4	71.4	85.7	85.7	85.7	71.4
Coincident index							
Percent change	6.0	3.7	3.4	3.2	2.4 p	2.0 p	1.7 p
Diffusion index	100.0	75.0	100.0	75.0	75.0	75.0	75.0

p Preliminary. r Revised (noted only for index levels and one-month percent changes).

CALCULATION NOTE: The diffusion indexes measure the proportion of the components that are rising. Components that rise more than 0.05 percent are given a value of 1.0, components that change less than 0.05 percent are given a value of 0.5, and components that fall more than 0.05 percent are given a value of 0.0.
