

THE CONFERENCE BOARD

FOR RELEASE: 10:00 A.M. KST, WEDNESDAY, SEPTEMBER 15, 2010

The Conference Board[®]
Korea Business Cycle IndicatorsSM
THE CONFERENCE BOARD LEADING ECONOMIC INDEX[®]
(LEI) FOR KOREA
AND RELATED COMPOSITE ECONOMIC INDEXES FOR JULY 2010

The Conference Board Leading Economic Index[®] (LEI) for Korea declined 0.7 percent and **The Conference Board Coincident Economic Index[®] (CEI)** increased 0.6 percent in July.

- The Conference Board LEI for Korea fell sharply in July, and the flat growth in June was revised down to a small decline. Large negative contributions from letter of credit arrivals, the (inverted) index of inventories to shipments, and real exports more than offset positive contributions from value of machinery orders, stock prices, and private construction orders. With the decline in July, the six-month growth rate of the leading economic index has continued to slow, to 1.2 percent (about a 2.5 percent annual rate) from January to July 2010, substantially down from 6.4 percent (about a 13.3 percent annual rate) for the previous six months. Moreover, the strengths among the leading indicators have become less widespread in recent months.
- The Conference Board CEI for Korea, a measure of current economic activity, increased in July. All the components in the coincident economic index advanced. With the increase this month, the coincident economic index grew by 3.4 percent (about a 6.9 percent annual rate) in the six-month period through July 2010, above the 0.6 percent increase (about a 1.1 percent annual rate) for the previous six months. At the same time, real GDP grew at a 5.8 percent annual rate in the second quarter of 2010, slower than the increase of 8.8 percent annual rate during the first quarter.
- The Conference Board LEI for Korea declined for the past two months, and its six-month growth rate has slowed sharply this year. Meanwhile, The Conference Board CEI for Korea remains on a rising trend, and its growth rate has picked up in the last six months. Taken together, the current behavior of the leading economic index and its components suggest that the economy will continue to grow, albeit at a modest pace in the near term.

LEADING INDICATORS. Three of the seven components that make up The Conference Board LEI for Korea increased in July. The positive contributors – from the largest positive contributor to the smallest – were value of machinery orders, stock prices, and private construction orders. Negative contributors – from the largest negative contributor to the smallest – were letter of credit arrivals, the (inverted) index of inventories to shipments, real exports FOB, and the (inverted) yield of government public bonds.

With the 0.7 percent decrease in July, The Conference Board LEI for Korea now stands at 115.4 (2004=100). Based on revised data, this index declined 0.2 percent in June and increased 0.9 percent in May. During the six-month span through July, the leading economic index increased 1.2 percent, with four of the seven components advancing (diffusion index, six-month span equals 57.1 percent).

The next release is scheduled for Thursday, October 14, 2010 at 10:00 A.M. (KST)
In the U.S – Wednesday, October 13, 2010 at 9:00 P.M (EST)

COINCIDENT INDICATORS. All four components that make up The Conference Board CEI for Korea increased in July. The positive contributors– in order from the largest positive contributor to the smallest – were the wholesale and retail sales component, total employment, industrial production, and monthly cash earnings.

With the 0.6 percent increase in July, The Conference Board CEI for Korea now stands at 113.0 (2004=100). Based on revised data, this index remained unchanged in June and increased 0.7 percent in May. During the six-month span through July, the coincident economic index increased 3.4 percent, with all four components advancing (diffusion index, six-month span equals 100.0 percent).

FOR TABLES AND CHARTS, SEE BELOW

DATA AVAILABILITY. The data series used to compute **The Conference Board Leading Economic Index[®]** (LEI) and **The Conference Board Coincident Economic Index[®]** (CEI) for Korea reported in this release are those available “as of” 10 A.M. (ET) on September 10, 2010.

* The series in the coincident economic index based on The Conference Board’s estimates is monthly cash earnings. There is no forecasted series in the leading economic index.

THE CYCLICAL INDICATOR APPROACH. The composite economic indexes are the key elements in an analytic system designed to signal peaks and troughs in the business cycle. The Conference Board LEI and CEI are essentially composite averages of several individual leading or coincident economic indicators. (See page 3 for details.) They are constructed to summarize and reveal common turning point patterns in economic data in a clearer and more convincing manner than any individual component—primarily because they smooth out some of the volatility of individual components.

Historically, the cyclical turning points in The Conference Board LEI have occurred before those in aggregate economic activity, while the cyclical turning points in The Conference Board CEI have occurred at about the same time as those in aggregate economic activity.

Korea Composite Indexes: Components and Standardization Factors

<u>Leading Economic Index</u>	<u>Factor</u>
1. Stock Prices	0.046
2. Value of Machinery Orders	0.031
3. Letter of Credit Arrivals	0.088
4. Index of Shipments to Inventories	0.086
5. Export FOB	0.102
6. Yield of Government Public Bonds	0.621
7. Private Construction Orders	0.026

<u>Coincident Economic Index</u>	
1. Industrial Production	0.127
2. Wholesale and Retail Trade	0.126
3. Employment	0.668
4. Monthly Cash Earnings	0.079

Notes:

The component factors are inversely related to the standard deviation of the month-to-month changes in each component. They are used to equalize the volatility of the contribution from each component and are “normalized” to sum to 1.

These factors were revised effective on the release for January 2010, and all historical values for the two composite economic indexes were revised at this time to reflect the changes. (Under normal circumstances, updates to The Conference Board LEI and CEI only incorporate revisions to data over the past six months.) The factors above for The Conference Board LEI were calculated using 1996-2008 as the sample period for measuring volatility. A separate set of factors for the 1982-1996, 1980 – 1982, 1976-1979, and 1971-1976 periods, are available upon request. The factors above for The Conference Board CEI were calculated using 1970-2008 as the sample period. These multiple sample periods are the result of different starting dates for the component data. When one or more components are missing, the other factors are adjusted proportionately to ensure that the total continues to sum to 1. For additional information on the standardization factors and the index methodology visit our Web site: <http://www.conference-board.org/data/bci.cfm>.

The trend adjustment factors for The Conference Board LEI are 0.0666 (calculated from June 1980 to December 2008) and -0.7671 (calculated from March 1971 to May 1980).

To address the problem of lags in available data, those leading and coincident economic indicators that are not available at the time of publication are estimated using statistical imputation. An autoregressive model is used to estimate each component. The resulting indexes are constructed using real and estimated data, and will be revised as the data unavailable at the time of publication become available. Such monthly data revisions are now a regular part of the U.S. Business Cycle and Global Indicators program. The main advantage of this procedure is to utilize in The Conference Board LEI the data such as bond yields, stock prices, and change in consumer confidence that are available sooner than other data on real aspects of the economy such as housing starts and new orders. Empirical research by The Conference Board suggests there are real gains in adopting this procedure to make all the indicator series as up-to-date as possible.

NOTICES

The 2010 schedule for **The Conference Board Leading Economic Index**[®] (LEI) for Korea news releases is:

August 2010 Data ... Wednesday, October 13, 2010
September 2010 Data ... Thursday, November 11, 2010
October 2010 Data ... Thursday, December 09, 2010

All releases are at 10:00 A.M. KST (following day), 8:00 P.M. (9:00 P.M. EST) ET

ABOUT THE CONFERENCE BOARD

The Conference Board is a global, independent business membership and research association working in the public interest. Our mission is unique: to provide the world's leading organizations with the practical knowledge they need to improve their performance and better serve society. The Conference Board is a non-advocacy, not-for-profit entity holding 501 (c) (3) tax-exempt status in the U.S. For additional information about The Conference Board and how it can meet your needs, visit our website at www.conference-board.org.

Table 1.--Summary of Korea Composite Economic Indexes

	2010						
	Jan.	Feb.	Mar.	Apr.	May.	Jun.	Jul.
Leading index	114.0	114.5	114.9 r	115.4 r	116.4 r	116.2 r	115.4
Percent change	-0.2	0.4	0.3 r	0.4 r	0.9 r	-0.2 r	-0.7
Diffusion index	50.0	57.1	71.4	64.3	35.7	42.9	42.9
Coincident index	109.3	110.8 r	111.2 r	111.5	112.3 r	112.3 p	113.0 p
Percent change	-1.2	1.4 r	0.4 r	0.3	0.7 r	0.0 p	0.6 p
Diffusion index	0.0	100.0	75.0	50.0	100.0	50.0	100.0
	Jul to Jan	Aug to Feb	Sep to Mar	Oct to Apr	Nov to May	Dec to Jun	Jan to Jul
Leading index							
Percent change	6.4	6.9	4.5 r	5.0 r	3.8 r	1.8 r	1.2
Diffusion index	71.4	100.0	71.4	85.7	71.4	71.4	57.1
Coincident index							
Percent change	0.6	1.9 r	1.8 r	1.6	1.5 r	1.5 p	3.4 p
Diffusion index	50.0	87.5	100.0	50.0	75.0	75.0	100.0

p Preliminary. r Revised (noted only for index levels and one-month percent changes).

CALCULATION NOTE: The diffusion indexes measure the proportion of the components that are rising. Components that rise more than 0.05 percent are given a value of 1.0, components that change less than 0.05 percent are given a value of 0.5, and components that fall more than 0.05 percent are given a value of 0.0.
