

THE CONFERENCE BOARD

FOR RELEASE: 10:00 A.M. (BRUSSELS TIME), WEDNESDAY, OCTOBER 28, 2009

The Conference Board®
Euro Area Business Cycle IndicatorsSM
THE CONFERENCE BOARD LEADING ECONOMIC INDEXTM
(LEI) FOR THE EURO AREA
AND RELATED COMPOSITE ECONOMIC INDEXES FOR SEPTEMBER 2009

BRUSSELS, October 28, 2009... The Conference Board Leading Economic IndexTM (LEI) for the Euro Area increased 1.2 percent and The Conference Board Coincident Economic IndexTM (CEI) decreased 0.1 percent in September.

- The Conference Board LEI for the Euro Area increased sharply for the sixth consecutive month in September, with the yield spread and the Economic Sentiment Index again making the largest positive contributions. Between March and September 2009, the leading economic index increased by 10.3 percent (about a 21.7 percent annual rate), a sharp reversal from the 7.2 percent decline (about a -13.9 percent annual rate) between September 2008 and March 2009. In addition, the strengths among the leading indicators have become very widespread, with all components increasing during the past six months.
- The Conference Board CEI for the Euro Area declined slightly again in September according to preliminary estimates. Between March and September 2009, the coincident economic index decreased by 0.5 percent (about a -1.0 percent annual rate), much slower than the 2.9 percent decline (about a -5.8 percent annual rate) during the previous six months. Additionally, the strengths and weaknesses among the coincident indicators have become balanced in recent months. At the same time, real GDP fell at a 0.7 percent annual rate (revised) in the second quarter of 2009, following a contraction of 9.6 percent annual rate in the first quarter.
- After declining rapidly from the middle of 2007 through the end of last year, The Conference Board LEI for the Euro Area has rebounded strongly during the past two quarters. The six-month growth rate in the index has continued to pick up, reaching the highest rate since 1987 amid widespread strength among its components. Meanwhile, the decline in The Conference Board CEI for the Euro Area has gradually slowed and many of its components are gaining strength. Taken together, the recent behavior of the composite economic indexes suggests that the downturn in economic activity is bottoming out and that economic conditions will improve in the near term.

LEADING INDICATORS. Seven of the eight components in The Conference Board LEI for the Euro Area increased in September. The positive contributors— in order from the largest positive contributor to the smallest— are the interest rate spread, the Economic Sentiment Index, real money supply*, the Markit Purchasing Managers' Index (manufacturing), the Dow Jones EURO STOXX® Index, the Markit business expectations index (services) and new orders of capital goods*. Residential building permits* was the only negative contributor in September.

The next release is scheduled for Monday, November 30, 2009 at 10:00 A.M. (Brussels Time)
In New York – Monday, November 30, 2009 at 4:00 A.M. (ET)

With the 1.2 percent increase in September, The Conference Board LEI for the Euro Area now stands at 100.6 (2004=100). Based on revised data, this index increased 1.8 percent in August and increased 1.7 percent in July. During the six-month span through September, the index increased 10.3 percent, with all eight components increasing (diffusion index, six-month span equals 100.0 percent).

COINCIDENT INDICATORS. Retail trade* was the only positive contributor to The Conference Board CEI for the Euro Area in September. Employment* declined in September while industrial production* and manufacturing turnover* remained unchanged.

With the 0.1 percent decline in September, The Conference Board CEI for the Euro Area now stands at 101.7 (2004=100). Based on revised data, this index decreased 0.1 percent in August and remained unchanged in July. During the six-month period through September, the index decreased 0.5 percent, with two of the four components increasing (diffusion index, six-month span equals 50.0 percent).

* See notes under data availability.

FOR TABLES AND CHARTS, SEE BELOW

DATA AVAILABILITY The data series used to compute **The Conference Board Leading Economic Index™** (LEI) for the Euro Area and **The Conference Board Coincident Economic Index™** (CEI) for the Euro Area reported in this release are those available “as of” 10:00 A.M. ET October 23, 2009. Some series are estimated as noted below.

NOTES: Series in The Conference Board LEI for the Euro Area that are based on our estimates are real money supply, residential building permits and new orders of capital goods. Series in The Conference Board CEI for the Euro Area that are based on our estimates are employment, industrial production, retail trade and manufacturing turnover.

Effective with the March 26, 2009 release, the retail trade component of The Conference Board CEI for the Euro Area changed slightly due to benchmark revisions by the source agency. As a result, “Volume of retail trade except for motor vehicles and motorcycles” replaced “volume of retail trade except for motor vehicles, motorcycles and repair of personal and household goods.” The difference between these component series is small and does not affect the cyclical characteristics of the coincident economic index.

THE CYCLICAL INDICATOR APPROACH. The composite economic indexes are the key elements in an analytic system designed to signal peaks and troughs in the business cycle. The leading and coincident economic indexes are essentially composite averages of several individual leading or coincident indicators. (See page 3 for details.) They are constructed to summarize and reveal common turning point patterns in economic data in a clearer and more convincing manner than any individual component—primarily because they smooth out some of the volatility of individual components.

Historically, the cyclical turning points in The Conference Board LEI for the Euro Area have occurred before those in aggregate economic activity, while the cyclical turning points in The Conference Board CEI for the Euro Area have occurred at about the same time as those in aggregate economic activity.

Further explanations of the cyclical indicator approach and the composite economic index methodology appear in The Conference Board's *Business Cycle Indicators* report and website: <http://www.conference-board.org/economics/bci/>.

Euro Area Composite Economic Indexes: Components and Standardization Factors

<u>Leading Economic Index</u>	<u>Factor</u>
1. Yield Spread cumulated, 10 year minus policy rate	0.2441
2. Economic Sentiment Index	0.1006
3. Markit Purchasing Managers' Index (Manufacturing)	0.1504
4. Markit Business Expectations Index (Services)	0.0696
5. Dow Jones EURO STOXX® Index	0.0298
6. Money Supply	0.3151
7. New Orders of Capital Goods	0.0413
8. Residential Building Permits	0.0491

<u>Coincident Economic Index</u>	
1. Employment	0.7685
2. Industrial Production	0.0795
3. Retail trade	0.1114
4. Manufacturing turnover	0.0406

Notes:

The standardization factors are inversely related to the standard deviation of the month-to-month changes in each component. They are used to equalize the volatility of the contribution from each component and are “normalized” to sum to 1.

These factors were revised effective on the release for January 2009, and all historical values for the two composite indexes were revised at this time to reflect the changes. (Under normal circumstances, updates to the leading and coincident indexes only incorporate revisions to data over the past six months.) The factors above were calculated using 2000-2007 as the sample period for measuring volatility for The Conference Board LEI for the Euro Area. Separate sets of factors for February 1987-December 1993, January 1994-January 1995, February 1995-January 1996, February 1996-June 1997, July 1997-July 1998 and August 1998-July 2000 are available upon request. The factors above for The Conference Board CEI for the Euro Area were calculated using 1995-2007. A separate set of factors is available for 1987- 1995. These multiple sample periods are the result of different starting dates for the component data. When one or more components are missing, the other factors are adjusted proportionately to ensure that the total continues to sum to 1. For additional information on the standardization factors and the index methodology visit our website: <http://www.conference-board.org/economics/bci/>.

The trend adjustment factors for The Conference Board LEI for the Euro Area are -0.3001 calculated over 1987-1996 and -0.3701 calculated over 1997-2007.

To address the problem of lags in available data, those leading and coincident indicators that are not available at the time of publication are estimated using statistical imputation. An autoregressive model is used to estimate each component. The resulting indexes are constructed using real and estimated data, and will be revised as the data unavailable at the time of publication become available. Such revisions are part of the monthly data revisions, now a regular part of the U.S. Business Cycle Indicators program. The main advantage of this procedure is to utilize in the leading economic index the data, such as stock prices, that are available sooner than other data on “real” aspects of the economy, such as new orders and changes in inventory. Empirical research by The Conference Board suggests there are real gains in adopting this procedure to make all the indicator series as up-to-date as possible.

NOTICES

The 2009 schedule for “**The Conference Board Leading Economic Index™** (LEI) for the Euro Area” news release is:

October 2009 Data..... Monday, November 30, 2009
November 2009 Data..... Wednesday, December 30, 2009

All releases are at 10:00 A.M. (Brussels Time)

ABOUT THE CONFERENCE BOARD

The Conference Board is a global, independent business membership and research association working in the public interest. Our mission is unique: To provide the world’s leading organizations with the practical knowledge they need to improve their performance *and* better serve society. The Conference Board is a non-advocacy, not-for-profit entity holding 501 (c) (3) tax-exempt status in the United States.

AVAILABLE FROM THE CONFERENCE BOARD:

Euro Area Business Cycle Indicators Internet Subscription \$ 635 per year (1 user)
(Includes monthly release, data, charts and commentary)
Individual Data Series \$ 35 per series downloaded
Monthly BCI Report \$ 275 per year
(Sample available at <http://www.conference-board.org/publications/describeBCI.cfm>)
BCI Handbook (published 2001) \$ 20
Corporate Site License contact Indicators Program at (212) 339-0330

Business Cycle Indicators for France, Germany, Japan, Korea, Mexico, Spain, the Euro Area and the U.K. are available at \$635 per country per year (1 user). Discounts are available to Associates of The Conference Board and accredited academic institutions.

THESE DATA ARE FOR ANALYSIS PURPOSES ONLY. NOT FOR REDISTRIBUTION, PUBLISHING, DATABASING, OR PUBLIC POSTING WITHOUT EXPRESS WRITTEN PERMISSION.

Table 1.--Summary of Euro Area Composite Economic Indexes

	2009						
	Mar.	Apr.	May.	Jun.	Jul.	Aug.	Sep.
Leading index	91.2	93.1 r	94.7 r	96.0 r	97.6 p	99.4 p	100.6 p
Percent change	-0.4	2.1 r	1.7 r	1.4 r	1.7 p	1.8 p	1.2 p
Diffusion index	31.3	87.5	81.3	81.3	62.5	62.5	81.3
Coincident index	102.2	102.1 r	102.0 r	101.9 p	101.9 p	101.8 p	101.7 p
Percent change	-0.3	-0.1 r	-0.1	-0.1 p	0.0 p	-0.1 p	-0.1 p
Diffusion index	12.5	25.0	50.0	37.5	50.0	50.0	62.5
	Sep to Mar	Oct to Apr	Nov to May	Dec to Jun	Jan to Jul	Feb to Aug	Mar to Sep
Leading index							
Percent change	-7.2	-2.5 r	1.1 r	4.6 r	6.0 p	8.5 p	10.3 p
Diffusion index	25.0	37.5	62.5	87.5	87.5	87.5	100.0
Coincident index							
Percent change	-2.9	-2.6 r	-2.3 r	-1.7 p	-1.1 p	-0.7 p	-0.5 p
Diffusion index	0.0	0.0	0.0	0.0	0.0	50.0	50.0

p Preliminary. r Revised (both noted only for index levels and one-month percent changes).

CALCULATION NOTE: The diffusion indexes measure the proportion of the components that are rising. Components that rise more than 0.05 percent are given a value of 1.0, components that change less than 0.05 percent are given a value of 0.5, and components that fall more than 0.05 percent are given a value of 0.0.
