

News Release

Jonathan Liu (732) 991-1754 / jonathan.liu@tcb.org

For Release 9:30 AM ET, January 22, 2026

Using the Composite Indexes: *The Leading Economic Index (LEI) provides an early indication of significant turning points in the business cycle and where the economy is heading in the near term. The Coincident Economic Index (CEI) provides an indication of the current state of the economy. Additional details are below.*

The Conference Board Leading Economic Index® (LEI) for France Ticked Up in November

The Conference Board Leading Economic Index® (LEI) for France inched up by 0.1% in November 2025 to 111.2 (2016=100), after increasing by 0.9% in October. Overall, the France LEI grew by 2.1% over the six-month period from May to November 2025, accelerating from an increase of 1.8% over the previous six-month period, from November 2024 to May 2025.

The Conference Board Coincident Economic Index® (CEI) for France also inched up by 0.1% to 110.9 (2016=100) in November 2025, after no change in October. Over the six-month period from May to November 2025, the CEI for France increased by 0.2%, an improvement from being unchanged over the previous six-month period.

Note for Change in Annual BCI Benchmark Revision Timing

Annual BCI Benchmark Revisions

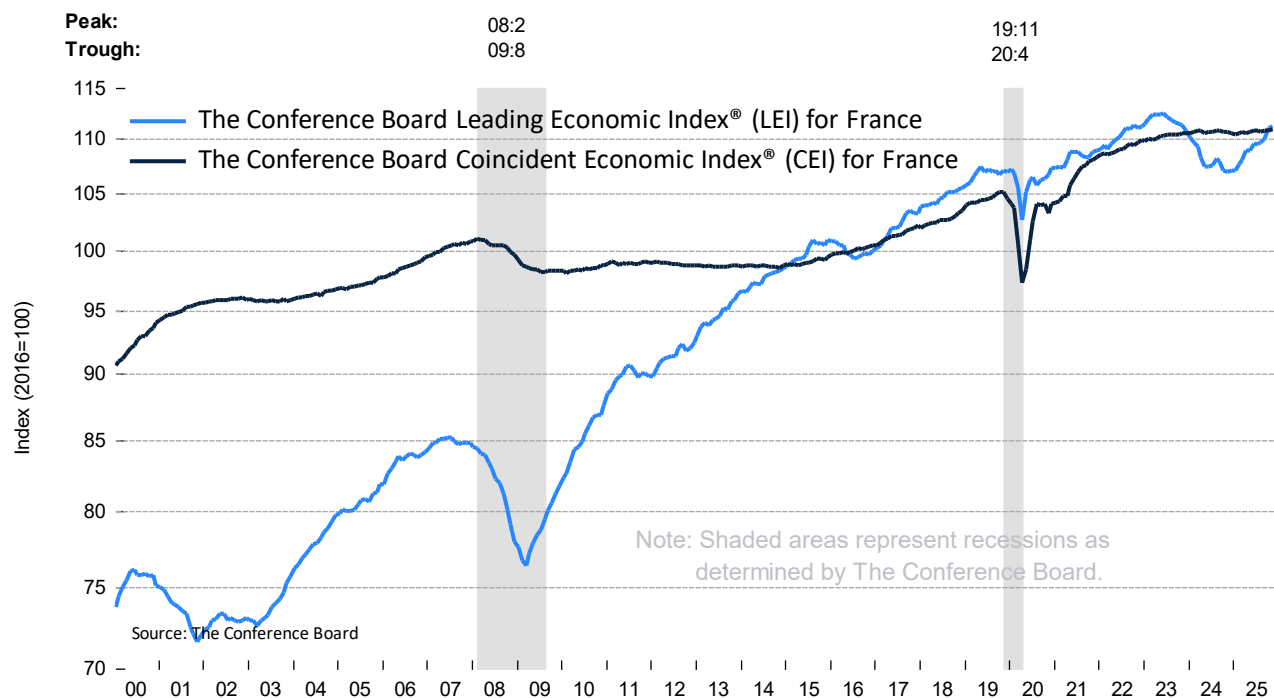

Release of the annual benchmark revisions for Business Cycle Indicator (BCI) composite economic indexes will be moved from **January 2026 to June 2026. Releases in subsequent years will also be in June.** This modification ensures that the sample period fully incorporates the most recent completed calendar year of the underlying components (source data) of composite indexes (leading and coincident). This data is used for calculating standardization factors and subsequently trend adjustments.

Due to the change in revision release timing from January to June, the cutoff for incorporating source data revisions into the benchmark process will shift accordingly:

- For the next benchmark revision in **June 2026**, the cutoff used for calculating standardization factors and trend adjustment will be **December 2025**, rather than December 2024.
 - This change in timing allows the volatility calculations and factor updates to reflect a more complete dataset prior to the annual recalculation of the historical composite indexes.
-

The next release is scheduled for Friday, February 13, 2026, at 9:30 A.M. ET.

The France LEI ticked up in November

In November, most components of the France LEI cooled, with minimal gain driven mainly by yield spread

The Conference Board Leading Economic Index® and Component Contributions (Percent)

Source: The Conference Board

* Inverted series; a negative change in this component makes a positive contribution.

** Statistical Imputation.--Q: Quarterly series; these series are converted to a monthly series through a linear interpolation

The short-term rates used are Day-to-Day Loan rate, Euribor, and Easier through the history of this variable.

LEI change might not equal sum of its contributions due to application of trend adjustment factor

The improving annual growth rate of the France LEI suggests economic tailwinds in 2026, but the strong signal needs to be discounted due to the widening yield spread being based in uncertainty related to severe political instability

About The Conference Board *Leading Economic Index*® (LEI) and *Coincident Economic Index*® (CEI) for France

The composite economic indexes are key elements in an analytic system designed to signal peaks and troughs in the business cycle. Comprised of multiple independent indicators, the indexes are constructed to summarize and reveal common turning points in the economy in a clearer and more convincing manner than any individual component.

The CEI reflects current economic conditions and is highly correlated with real GDP. The LEI is a predictive tool that anticipates—or “leads”—turning points in the business cycle by around twelve months.

The seven components of *Leading Economic Index*® for France are:

- Yield Spread
- Stock Prices
- Building Permits
- New Unemployment Claims
- Industrial New Orders
- Production Expectations
- Ratio P/L Cost

The four components of the *Coincident Economic Index*® for France are:

- Industrial Production
- Personal Consumption
- Employment (Private sector)
- Wages and Salaries
