

THE CONFERENCE BOARD

FOR RELEASE: 10:00 A.M. JST, FRIDAY, AUGUST 14, 2015

The Conference Board[®]
Japan Business Cycle IndicatorsSM
THE CONFERENCE BOARD LEADING ECONOMIC INDEX[®] (LEI)
FOR JAPAN
AND RELATED COMPOSITE ECONOMIC INDEXES FOR JUNE 2015

The Conference Board Leading Economic Index[®] (LEI) for Japan increased 0.4 percent and **The Conference Board Coincident Economic Index[®] (CEI)** increased 0.6 percent in June.

- The Conference Board LEI for Japan improved in June, after declining in May. Large positive contributions from dwelling units started and business failures more than offset the negative contributions from stock prices and the six-month growth rate of labor productivity component. Between December 2014 and June 2015, the leading economic index contracted by 0.5 percent (about a -1.0 percent annual rate), a reversal from the increase of 1.2 percent (about a 2.4 percent annual rate) over the prior six months. However, the strengths among the leading indicators continue to be slightly more widespread than the weaknesses.
- The Conference Board CEI for Japan, a measure of current economic activity, also increased in June. The coincident economic index improved by 0.3 percent (about a 0.6 percent annual rate) during the six months ending in June 2015, after increasing by 0.5 percent (about a 1.0 percent annual rate) over the preceding six months. The strengths among the coincident indicators have become more widespread than the weaknesses in recent months. At the same time, real GDP expanded by 3.9 percent (annual rate) in the first quarter of 2015, after expanding by 1.2 percent (annual rate) in the fourth quarter of 2014.
- The Conference Board LEI for Japan increased in June after being on a gradual downward trend since the beginning of the year. However, its six-month growth rate remains in negative territory. The CEI also improved, and its six-month growth rate is now in positive territory. Taken together, the recent behavior of both indexes suggests that the growth in economic activity should continue, but is unlikely to gain momentum in the short-term.

LEADING INDICATORS. Eight of the ten components that make up The Conference Board LEI for Japan increased in June. The positive contributors to the index – in order from the largest positive contributor to the smallest – include dwelling units started, (inverted) business failures, the new orders for machinery and construction component*, the Tankan business conditions survey, the interest rate spread, real money supply, the index of overtime worked, and real operating profits*. The negative contributors this month were stock prices and the six-month growth rate of labor productivity.

The next release is scheduled for Tuesday, September 15, 2015 at 10:00 A.M. (JST)

In the U.S – Monday, September 14, 2015 at 9:00 P.M. (ET)

With the increase of 0.4 percent in June, The Conference Board LEI for Japan now stands at 103.0 (2010=100). Based on revised data, this index decreased 0.2 percent in May and was unchanged in April. During the six-month span through June, the index decreased 0.5 percent, and six of the ten components advanced (diffusion index, six-month span equals 60.0 percent).

COINCIDENT INDICATORS. All four components that make up The Conference Board CEI for Japan increased in June. The positive contributors to the index – in order from the largest positive contributor to the smallest – include the number of employed persons, the retail, wholesale, and manufacturing sales* component, industrial production, and wage and salary income.

With the increase of 0.6 percent in June, The Conference Board CEI for Japan now stands at 98.3 (2010=100). Based on revised data, this index decreased 0.2 percent in May and decreased 0.1 percent in April. During the six-month span through June, the index increased 0.3 percent, and two of the four components advanced (diffusion index, six-month span equals 62.5 percent).

FOR TABLES AND CHARTS, SEE BELOW

DATA AVAILABILITY AND NOTES. The data series used to compute **The Conference Board Leading Economic Index**[®] (LEI) for Japan and **The Conference Board Coincident Economic Index**[®] (CEI) for Japan reported in this release are those available “as of” 9:00 A.M. ET August 10, 2015. Some series are estimated as noted below.

* The series in The Conference Board LEI that are based on our estimates are the six-month growth rate of labor productivity, real operating profits and new orders for machinery. The series in The Conference Board CEI that is based on our estimates is real manufacturing sales.

THE CYCLICAL INDICATOR APPROACH. The composite economic indexes are the key elements in an analytic system designed to signal peaks and troughs in the business cycle. The leading and coincident economic indexes are essentially composite averages of several individual leading or coincident economic indicators. (See page 3 for details.) They are constructed to summarize and reveal common turning point patterns in economic data in a clearer and more convincing manner than any individual component—primarily because they smooth out some of the volatility of individual components.

Historically, the cyclical turning points in the leading economic index have occurred before those in aggregate economic activity, while the cyclical turning points in the coincident economic index have occurred at about the same time as those in aggregate economic activity.

Japan Composite Economic Indexes: Components and Standardization Factors

<u>Leading Economic Index</u>	<u>Factor</u>
1 Operating Profits	0.0516
2 Dwelling Units Started	0.0298
3 Business Failures	0.0618
4 Index of Overtime Worked	0.0910
5 Stock Prices (TOPIX)	0.0385
6 Six-Month Growth Rate of Labor Productivity	0.1031
7 Tankan Business Conditions Survey	0.0885
8 Money Supply	0.2996
9 Yield Spread	0.1811
10 New Orders for Machinery and Construction	0.0550
 <u>Coincident Economic Index</u>	
1 Number of Employed Persons	0.5625
2 Industrial Production	0.0934
3 Wage and Salary Income	0.1866
4 Real Retail, Wholesale, and Manufacturing Sales	0.1575

Notes:

The component factors are inversely related to the standard deviation of the month-to-month changes in each component. They are used to equalize the volatility of the contribution from each component and are “normalized” to sum to 1.

These factors were revised effective with the release in January 2015, and all historical values for the two composite economic indexes were revised at this time to reflect the changes. (Under normal circumstances, updates to the leading and coincident economic indexes only incorporate revisions to data over the past six months.) The factors above for The Conference Board LEI were calculated using the September 1974 to December 2013 period as the sample period for measuring volatility. Separate sets of factors for the December 1973 to August 1974 period, the February 1973 to November 1973 period, and February 1965 to January 1973 period, are available upon request. The factors above for The Conference Board CEI were calculated using the August 1978 to December 2013 period as the sample period. Separate sets of factors for the February 1970 to July 1978 period, and the February 1965 to January 1970 period are available upon request. These multiple sample periods are the result of different starting dates for the component data. When one or more components are missing, the other factors are adjusted proportionately to ensure that the total continues to sum to 1. For additional information on the standardization factors and the index methodology visit our Web site: www.conference-board.org/data/bci.cfm

The trend adjustment factors for The Conference Board LEI are -0.3201 (calculated over the 1992-2013 period) and -0.2633 (calculated over the 1965 – 1991 period).

To address the problem of lags in available data, those leading and coincident indicators that are not available at the time of publication are estimated using statistical imputation. An autoregressive model is used to estimate each component. The resulting indexes are constructed using real and estimated data, and will be revised as the data unavailable at the time of publication become available. Such monthly data revisions are now a regular part of the U.S. Business Cycle and Global Indicators program. The main advantage of this procedure is to utilize The Conference Board LEI the data such as bond yields, stock prices, and change in consumer confidence that are available sooner than other data on real aspects of the economy such as housing starts and new orders. Empirical research by The Conference Board suggests there are real gains in adopting this procedure to make all the indicator series as up-to-date as possible.

NOTICES

The Conference Board Leading Economic Index[®] (LEI) for Japan news releases schedule for 2015:

Monday, September 14, 2015	For July 2015 data
Tuesday, October 13, 2015	For August 2015 data
Thursday, November 12, 2015	For September 2015 data
Thursday, December 10, 2015	For October 2015 data

All releases are at 10:00 A.M. JST (following day), 8:00 P.M. (9:00 P.M. EDT) ET

AVAILABLE FROM THE CONFERENCE BOARD:

Japan Business Cycle Indicators Internet Subscription *(Includes monthly release, data, charts and commentary)*

\$ 735 (for TCB members)/\$ 935 (for non-TCB members) per year (1 user)

Individual Data Series

\$ 70 per series downloaded

Monthly BCI Report (PDF)

(Sample available at <http://www.conference-board.org/publications/publicationdetail.cfm?publicationid=852>)

\$ 295 (for TCB members)/\$ 365 (for non-TCB members) per year

BCI Handbook (published 2001) PDF only – website download

Corporate Site License

Contact Indicators Program at indicators@conference-board.org

Business Cycle Indicators for Brazil, China, the Euro Area, France, Germany, India, Japan, Korea, Mexico, Spain, the U.K, and the U.S. are available at \$735 (for TCB members)/\$ 935 (for non-TCB members) per country per year (1 user). Discounts are accredited academic institutions.

**The Conference Board Leading Economic Index® (LEI) and
The Conference Board Coincident Economic Index® (CEI) for Japan**

Table 1. - Summary of Japan Composite Economic Indexes

	2014		2015				
	Dec	Jan	Feb	Mar	Apr	May	Jun
Leading index	103.5	103.3	103.2	102.8 p	102.8 p	102.6 p	103.0 p
Percent change	-0.1	-0.2	-0.1	-0.4 p	0.0 p	-0.2 p	0.4 p
