

THE CONFERENCE BOARD

FOR RELEASE: 10:00 A.M. (MADRID TIME), WEDNESDAY, JUNE 12, 2013

The Conference Board®
Spain Business Cycle IndicatorsSM
**THE CONFERENCE BOARD LEADING ECONOMIC INDEX® (LEI)
FOR SPAIN**
AND RELATED COMPOSITE ECONOMIC INDEXES FOR APRIL 2013

BRUSSELS, June 12, 2013... The Conference Board Leading Economic Index® (LEI) for Spain increased 0.7 percent and The Conference Board Coincident Economic Index® (CEI) decreased 0.1 percent in April.

- The Conference Board LEI for Spain rose in April, as positive contributions from job placings, the inverted long-term government bond yield, and stock prices more than offset negative contributions from the Spanish contribution to Euro M2 and the order books survey. During the past six months, the leading index increased by 1.8 percent (about a 3.7 percent annual rate), faster than its 0.4 percent increase (about a 0.8 percent annual rate) during the previous six months. In addition, the strengths among the leading indicators have remained more widespread than the weaknesses in recent months.
- The Conference Board CEI for Spain, a measure of current economic activity, decreased again in April. The coincident economic index declined by 1.8 percent (about a -3.5 percent annual rate) between October 2012 and April 2013, the same rate as during the previous six months. Additionally, the weaknesses among the coincident indicators have remained more widespread than strengths. Meanwhile, GDP declined by 2.1 percent (annual rate) in the first quarter, continuing its extended contraction which began in the middle of 2011.
- The LEI for Spain increased for the second time this year, though its six-month growth rate has slowed. Meanwhile, the CEI for Spain has been on a downward trend for almost two years, however the pace of its decline has slowed since the beginning of 2013. Taken together, the recent behavior of the composite indexes suggests that the current contraction in the economy is likely to continue, though its pace may ease in the near term.

LEADING INDICATORS. Four of the six components that make up The Conference Board LEI for Spain increased in April. The positive contributors — in order from the largest positive contributor to the smallest — are job placings, the inverted long-term government bond yield, the Spanish equity price index, and the capital equipment component of industrial production. The negative contributors — in order from the larger negative contributor to the smaller — are the Spanish contribution to Euro M2 and the order books survey.

With the increase of 0.7 percent in April, The Conference Board LEI for Spain now stands at 105.0 (2004=100). Based on revised data, this index declined 0.3 percent in March and declined 0.4 percent in February. During the six-month span through April, the index increased 1.8 percent, and five of the six components advanced (diffusion index, six-month span equals 83.3 percent).

The next release is scheduled for Tuesday, July 16, 2013 at 10:00 A.M. (Madrid Time)

In the U.S. – Tuesday, July 16, 2013 at 4:00 A.M. (ET)

COINCIDENT INDICATORS. Two of the five components that make up The Conference Board CEI for Spain increased in April. The positive contributors — starting from the larger positive contributor — are the retail sales survey and real imports*. Employment* and industrial production excluding construction declined in April.

With the decline of 0.1 percent in April, The Conference Board CEI for Spain now stands at 94.0 (2004=100). Based on revised data, this index decreased 0.2 percent in both March and February. During the six-month span through April, the index decreased 1.8 percent, and only one of the five components advanced (diffusion index, six-month span equals 20.0 percent).

FOR TABLES AND CHARTS, SEE BELOW

DATA AVAILABILITY. The data series used to compute **The Conference Board Leading Economic Index[®]** (LEI) for Spain and **The Conference Board Coincident Economic Index[®]** (CEI) for Spain reported in the tables in this release are those available “as of” 10 A.M. (ET) June 10, 2013. Some series are estimated as noted below.

NOTES: Series in The Conference Board CEI for Spain that are based on our estimates include final household consumption, employment, and real imports.

THE CYCLICAL INDICATOR APPROACH. The composite economic indexes are the key elements in an analytic system designed to signal peaks and troughs in the business cycle. The leading and coincident economic indexes are essentially composite averages of several individual leading or coincident indicators. (See page 3 for details.) They are constructed to summarize and reveal common turning point patterns in economic data in a clearer and more convincing manner than any individual component—primarily because they smooth out some of the volatility of individual components.

Historically, the cyclical turning points in The Conference Board LEI for Spain have occurred before those in aggregate economic activity, while the cyclical turning points in The Conference Board CEI for Spain have occurred at about the same time as those in aggregate economic activity.

Further explanations of the cyclical indicator approach and the composite economic index methodology appear in The Conference Board’s *Business Cycle Indicators* report and website: <http://www.conference-board.org/data/bci.cfm>.

Spain Composite Economic Indexes: Components and Standardization Factors

<u>Leading Economic Index</u>	<u>Factor</u>
1 Capital Equipment Component of Industrial Production	0.0491
2 Contribution to Euro M2	0.1856
3 Stock Price Index	0.0282
4 Long term Government Bond Yield	0.5484
5 Order Books Survey	0.1158
6 Job Placings	0.0729

<u>Coincident Economic Index</u>	<u>Factor</u>
1 Final Consumption Expenditure	0.3820
2 Industrial Production (2005=100)	0.1400
3 Real Imports (3 month moving average)	0.0423
4 Retail Sales Survey	0.0475
5 Employment	0.3882

Notes:

The component factors are inversely related to the standard deviation of the month-to-month changes in each component. They are used to equalize the volatility of the contribution from each component and are “normalized” to sum to 1.

These factors were revised effective on the release for January 2013, and all historical values for the two composite indexes were revised at this time to reflect the changes. (Under normal circumstances, updates to the leading and coincident economic indexes only incorporate revisions to data over the past six months.) The factors above for The Conference Board LEI for Spain were calculated using the October 1997 to December 2011 period as the sample period for measuring volatility. A separate set of factors for the February 1984 to September 1997 period, is available upon request. The factors above for The Conference Board CEI for Spain were calculated using the February 1995 to December 2011 period as the sample period. Separate sets of factors for the February 1984 to January 1985 period, the February 1985 to October 1994 period, and the November 1994 to January 1995 period are available upon request. These multiple sample periods are the result of different starting dates for the component data. When one or more components are missing, the other factors are adjusted proportionately to ensure that the total continues to sum to 1. For additional information on the standardization factors and the index methodology visit our website: <http://www.conference-board.org/data/bci.cfm>.

The trend adjustment factor for The Conference Board LEI for Spain is 0.0153, calculated over the 1984-2011 period.

To address the problem of lags in available data, those leading and coincident indicators that are not available at the time of publication are estimated using statistical imputation. An autoregressive model is used to estimate each component. The resulting indexes are constructed using real and estimated data, and will be revised as the data unavailable at the time of publication become available. Such revisions are part of the monthly data revisions, now a regular part of the U.S. Business Cycle Indicators program. The main advantage of this procedure is to utilize in the leading economic index the data, such as stock prices, that are available sooner than other data on “real” aspects of the economy, such as new orders and changes in inventory. Empirical research by The Conference Board suggests there are real gains in adopting this procedure to make all the indicator series as up-to-date as possible.

NOTICES

The 2013 schedule for “**The Conference Board Leading Economic Index**® (LEI) for Spain” news release is:

May 2013	Tuesday, July 16, 2013
June 2013	Tuesday, August 13, 2013
July 2013	Friday, September 13, 2013
August 2013	Wednesday, October 16, 2013
September 2013	Friday, November 15, 2013
October 2013	Tuesday, December 17, 2013

All releases are at 10:00 A.M. (Madrid Time)

ABOUT THE CONFERENCE BOARD

The Conference Board is a global, independent business membership and research association working in the public interest. Our mission is unique: To provide the world’s leading organizations with the practical knowledge they need to improve their performance *and* better serve society. The Conference Board is a non-advocacy, not-for-profit entity holding 501 (c) (3) tax-exempt status in the United States.

AVAILABLE FROM THE CONFERENCE BOARD

Spain Business Cycle Indicators Internet Subscription

(Includes monthly release, data, charts and commentary)

\$ 650 (for TCB members)/\$825 (for non-TCB members) per year (1 user)

Individual Data Series

\$60 per series downloaded

Monthly BCI Report (PDF)

(Sample available at <http://www.conference-board.org/data/monthlybci.cfm>)

\$ 265 (for TCB members)/\$325 (for non-TCB members) per year

BCI Handbook (published 2001)

\$25

Corporate Site License

Contact Indicators Program at (212) 339-0330

Business Cycle Indicators for the U.S., China, the Euro Area, France, Germany, Korea, Mexico, and the U.K., are available at \$650 (for TCB members)/\$825 (for non-TCB members) per country per year (1 user). Discounts are available to Associates of The Conference Board and accredited academic institutions.
