

FOR RELEASE: 10:00 A.M. ET, Monday, May 19, 2025

## The Conference Board® US Business Cycle Indicators

# THE CONFERENCE BOARD LEADING ECONOMIC INDEX® (LEI) FOR THE UNITED STATES AND RELATED COMPOSITE ECONOMIC INDEXES FOR APRIL 2025

The Conference Board Leading Economic Index<sup>®</sup> (LEI) for the US decreased by 1.0%, The Conference Board Coincident Economic Index<sup>®</sup> (CEI) increased by 0.1%, and The Conference Board Lagging Economic Index<sup>®</sup> (LAG) increased by 0.3% in April.

- The Conference Board LEI for the US decreased for the fifth consecutive month in April. Large negative contributions from average consumer expectations for business conditions and the S&P 500<sup>®</sup> Stock Index fueled the most recent decline. In the six-month period ending April 2025, the leading economic index decreased by 2.0% (about a –3.9% annual rate), the same rate of contraction as over the previous six months. In addition, the weaknesses among the leading indicators became more widespread as only three out of 10 components advanced between October 2024 and April 2025.
- The Conference Board CEI for the US, a measure of current economic activity, edged up in April. The coincident economic index rose by 1.1% (about a 2.3% annual rate) between October 2024 and April 2025, slightly faster than its growth of 0.9% (about a 1.8% annual rate) over the previous six months. In addition, the strengths among the coincident indicators have remained very widespread, with all four components advancing over the past six months. The lagging economic index rebounded in April and increased at a slightly higher pace than the CEI. As a result, the coincident-to-lagging ratio declined. Real GDP contracted at a –0.3% annual rate in Q1 2025, after increasing by 2.4% (annual rate) in Q4 2024.
- The Conference Board LEI for the US deteriorated at a rapid pace in April. Meanwhile, The Conference Board CEI for the US has been rising only very slowly, reflecting current economic pressures. Taken together, the current behavior of the composite indexes and their components suggest much slower activity ahead, which is consistent with the expected impact of tariffs.

<u>LEADING INDICATORS</u>: Three of the 10 indicators that comprise *The Conference Board Leading Economic Index*® for the US increased in April. The positive contributors—beginning with the largest positive contributor—were manufacturers' new orders for nondefense capital goods excluding aircraft\*, the Leading Credit Index<sup>TM</sup> (inverted) and manufacturers' new orders for consumer goods and materials\*. The negative contributors—beginning with the largest negative contributor—were average consumer expectations for business conditions, S&P 500® Stock Index, the ISM® New Orders Index, building permits, average weekly manufacturing hours, average weekly initial claims for unemployment insurance (inverted), and the interest rate spread.

The LEI for the US decreased by 1.0% in April and now stands at 99.4 (2016=100). Based on revised data, this index decreased by 0.8% in March and decreased by 0.2% in February. Over the six-month span through April, the leading economic index decreased by 2.0%, with 3 out of 10 components advancing (diffusion index, six-month span equals 35%).

<u>COINCIDENT INDICATORS:</u> Three of the 4 indicators that comprise *The Conference Board Coincident Economic Index*® for the US increased in April. The positive contributors to the index—beginning with the largest positive contributor—were personal income less transfer payments\*, employees on nonagricultural payrolls, and manufacturing and trade sales\*, while industrial production held relatively steady in April.

The CEI increased by 0.1% in April and now stands at 114.8 (2016=100). Based on revised data, this index increased by 0.3% in March and increased by 0.4% in February. During the six-month period through April, the coincident economic index increased by 1.1%, with all 4 components advancing (diffusion index, six-month span equals 100%).

<u>LAGGING INDICATORS:</u> The Conference Board Lagging Economic Index® for the US increased by 0.3% in April and now stands at 119.3 (2016=100), with 3 of its 7 components advancing. The positive contributors to the index—beginning with the largest positive contributor—were commercial and industrial loans outstanding\*, the ratio of manufacturing and trade inventories to sales\*, and the ratio of consumer installment credit outstanding to personal income\*. The negative contributors were the average duration of unemployment (inverted) and change in the index of labor cost per unit of output, manufacturing\*. The average prime rate charged by banks and the change in CPI for services held steady in April. Based on revised data, the lagging economic index decreased by 0.1% in March and increased by 0.3% in February.

#### DATA AVAILABILITY AND NOTES.

The data series used to compute **The Conference Board Leading Economic Index**<sup>®</sup> (LEI) for the US, **The Conference Board Coincident Economic Index**<sup>®</sup> (CEI) for the US and **The Conference Board Lagging Economic Index**<sup>®</sup> (LAG) for the US and reported in the tables in this release are those available "as of" 10:00 am ET on May 16, 2025. Some series are estimated as noted below.

\* Series in The Conference Board LEI for the US based on our estimates are manufacturers' new orders for consumer goods and materials and manufacturers' new orders for nondefense capital goods excluding aircraft. Series in The Conference Board CEI for the US that are based on our estimates are personal income less transfer payments and manufacturing and trade sales. Series in The Conference Board LAG for the US that are based on our estimates are manufacturing and trade inventories to sales ratio, the change in labor cost per unit of output, manufacturing, consumer installment credit to income ratio, and the personal consumption expenditure deflator used to deflate commercial and industrial loans outstanding.

The procedure used to estimate the current month's personal consumption expenditure deflator (used in the calculation of commercial and industrial loans outstanding) incorporates the current month's consumer price index when it is available before the release of The Conference Board LEI for the US.

THE CYCLICAL INDICATOR APPROACH. The composite economic indexes are the key elements in an analytic system designed to signal peaks and troughs in the business cycle. The leading, coincident, and lagging economic indexes are essentially composite averages of several individual leading, coincident, or lagging indicators. (See page 3 for details.) They are constructed to summarize and reveal common turning point patterns in economic data in a clearer and more convincing manner than any individual component—primarily because they smooth out some of the volatility of individual components.

Historically, the cyclical turning points in The Conference Board LEI for the US have occurred before those in aggregate economic activity, while the cyclical turning points in The Conference Board CEI for the US have occurred at about the same time as those in aggregate economic activity. The cyclical turning points in The Conference Board LAG for the US generally have occurred after those in aggregate economic activity.

#### US Composite Economic Indexes: Components and Standardization Factors

Leading Economic Index		<u>Factor</u>
1	Average weekly hours, manufacturing	0.2464
2	Average weekly initial claims for unemployment insurance	0.0142
3	Manufacturers' new orders, consumer goods and materials	0.0777
4	ISM® New Orders Index	0.1657
5	Manufacturers' new orders, nondefense capital goods excl.	
	aircraft	0.0472
6	Building permits, new private housing units	0.0301
7	S&P 500® Stock Index	0.0418
8	Leading Credit Index <sup>TM</sup>	0.1012
9	Interest rate spread, 10-year Treasury bonds less federal funds	0.1200
10	Avg. consumer expectations for business conditions	0.1557
Coincident Economic Index		
1	Employees on nonagricultural payrolls	0.3265
2	Personal income less transfer payments	0.3120
3	Industrial production	0.1926
4	Manufacturing and trade sales	0.1689
Lagging Economic Index		
1	Inventories to sales ratio, manufacturing and trade	0.1222
2	Average duration of unemployment	0.0278
3	Consumer installment credit outstanding to personal income	****
	ratio	0.1136
4	Commercial and industrial loans	0.0913
5	Average prime rate	0.3525
6	I 1	
	Labor cost per unit of output, manufacturing	0.0522

#### Notes:

The component factors are inversely related to the standard deviation of the month-to-month changes in each component. They are used to equalize the volatility of the contribution from each component and are "normalized" to sum to 1. When one or more components are missing, the other factors are adjusted proportionately to ensure that the total continues to sum to 1.

These factors were revised effective with the release in January 2025, and all historical values for the three composite economic indexes were revised at this time to reflect the changes. (Under normal circumstances, updates to the leading, coincident, and lagging economic indexes only incorporate revisions to data over the past six months.) The factors for The Conference Board LEI for the US were calculated using May 1990-December 2023 as the sample period for measuring volatility. A separate set of factors for the February 1959 - December 1977, January 1978 - December 1983 and January 1984 – April 1990 periods are available upon request. The primary sample period for the coincident and lagging economic indexes was February 1959 – December 2023. For additional information on the standardization factors and the index methodology see: "Benchmark Revisions in the Composite Indexes," *Business Cycle Indicators* December 1997 and "Technical Appendix: Calculating the Composite Indexes" *Business Cycle Indicators* December 1996, or the Website: www.conference-board.org/topics/business-cycle-indicators.

The trend adjustment factor for The Conference Board LEI for the US is -0.0858 (over the 1984 – present) and 0.1096 (over the 1959-1983 period), and the trend adjustment factor for The Conference Board LAG for the US is 0.1588.

To address the problem of lags in available data, those leading, coincident and lagging indicators that are not available at the time of publication are estimated using statistical imputation. An autoregressive model is used to estimate each unavailable component. The resulting indexes are therefore constructed using real and estimated data and will be revised as the unavailable data during the time of publication become available. Such revisions are part of the monthly data revisions, now a regular part of the US Business Cycle Indicators program. The main advantage of this procedure is to utilize in the leading economic index data such as stock prices, interest rate spread, and manufacturing hours that are available sooner than other data on real aspects of the economy such as manufacturers' new orders. Empirical research by The Conference Board suggests that there are real gains in adopting this procedure to make all the indicator series as up-to-date as possible.

#### **NOTICES**

The Conference Board Leading Economic Index® (LEI) for the US news release schedule for 2025:

For December 2024 data	
For January 2025 data	
For February 2025 data	
For March 2025 data	
For April 2025 data	
For May 2025 data	
For June 2025 data	
For July 2025 data	
For August 2025 data	
For September 2025 data	
For October 2025 data	
For November 2025 data	

All releases are at 10:00 AM ET
