For Release 10:00 AM ET, April 22, 2021

The Conference Board Leading Economic Index® (LEI) for the U.S. Increased in March

NEW YORK, April 22, 2021...The Conference Board Leading Economic Index® (LEI) for the U.S. increased 1.3 percent in March to 111.6 (2016 = 100), following a 0.1 percent decrease in February and a 0.5 percent increase in January.

“The U.S. LEI rose sharply in March, which more than offset February’s slightly negative revised figure,” said Ataman Ozyildirim, Senior Director of Economic Research at The Conference Board. “The improvement in the U.S. LEI, with all ten components contributing positively, suggests economic momentum is increasing in the near term. The widespread gains among the leading indicators are supported by an accelerating vaccination campaign, gradual lifting of mobility restrictions, as well as current and expected fiscal stimulus. The recent trend in the U.S. LEI is consistent with the economy picking up in the coming months, and The Conference Board now projects year-over-year growth could reach 6.0 percent in 2021.”

The Conference Board Coincident Economic Index® (CEI) for the U.S. increased 0.6 percent in March to 104.0 (2016 = 100), following a 0.1 percent decrease in February and a 0.5 percent increase in January.

The Conference Board Lagging Economic Index® (LAG) for the U.S. decreased 0.5 percent in March to 105.1 (2016 = 100), following a 1.6 percent increase in February and 2.7 percent decrease in January.

The next release is scheduled for Thursday, May 20 at 10 A.M. ET.

About The Conference Board Leading Economic Index® (LEI) for the U.S.
The composite economic indexes are the key elements in an analytic system designed to signal peaks and troughs in the business cycle. The leading, coincident, and lagging economic indexes are essentially composite averages of several individual leading, coincident, or lagging indicators. They are constructed to summarize and reveal common turning point patterns in economic data in a clearer and more convincing manner than any individual component – primarily because they smooth out some of the volatility of individual components.

The ten components of The Conference Board Leading Economic Index® for the U.S. include:

- Average weekly hours, manufacturing
- Average weekly initial claims for unemployment insurance
- Manufacturers’ new orders, consumer goods and materials
- ISM® Index of New Orders
- Manufacturers’ new orders, nondefense capital goods excluding aircraft orders
- Building permits, new private housing units
- Stock prices, 500 common stocks
- Leading Credit Index™
- Interest rate spread, 10-year Treasury bonds less federal funds
- Average consumer expectations for business conditions
