

# 2024 US Energy Production

by type of fuel

Quadrillion British thermal units

**Natural gas**  
(tied with 2023)

**Crude oil**

Primary energy sources with record production in 2024

**Natural gas plant liquids**

**Renewables**

## RECOMMENDATIONS

Both fossil fuels and renewables are important to energy independence.

The power of markets should drive energy policy; government should skew policy as little as possible.

States have a role in promoting US clean energy industries, which preserves US jobs.

Modernize and expand the grid, adding new capacity from all sources.

US business is leading energy innovation and reducing emissions in its business interest.
