Mexico's economic dependence on the US makes it very vulnerable to US trade protectionism. Mexico's dependence on the global economy has significantly increased in the last decade and now accounts for close to 20% of Mexican GDP.

Mexico's competitiveness hinges not on productivity but on low wages and a depreciated currency. Labor compensation per hour in the manufacturing sector in Mexico was 16% of that in the US but 3.9% above Chinese levels.

Mexico's economic dependence on the US makes it very vulnerable to US trade protectionism.

Mexico's competitiveness hinges not on productivity but on low wages and a depreciated currency.

/* Image and infographic details */

Labor productivity in Mexican manufacturing is only about a quarter of the US. Unit labor costs (compensation per unit of output) in Mexican manufacturing were 35% of US costs in 2015.

- Labor productivity in Mexican manufacturing is only about a quarter of the US.
- Unit labor costs (compensation per unit of output) in Mexican manufacturing were 35% of US costs in 2015.

Mexico's economic dependence on the US makes it very vulnerable to US trade protectionism.
